

UST6 (N-12): sc-132867

BACKGROUND

Members of the SLC22 family mediate anion transport and are expressed primarily in liver and kidney. UST6 (unknown substrate transporter 6), also known as HIMTP or SLC22A25 (solute carrier family 22, member 25), is a 547 amino acid multi-pass membrane protein belonging to the major facilitator superfamily and the organic cation transporter family. Exclusively expressed in liver in both embryo and adult, UST6 is involved in organic anion transport. The gene encoding SLC22A25 is located on human chromosome 11, which houses over 1,400 genes and comprises nearly 4% of the human genome. Jervell and Lange-Nielsen syndrome, Jacobsen syndrome, Niemann-Pick disease, hereditary angioedema and Smith-Lemli-Opitz syndrome are associated with defects in genes that maps to chromosome 11.
