

PITP α (5F12): sc-13569

BACKGROUND

The lipid binding proteins known as phosphatidylinositol transfer proteins (PITP) facilitate the formation of phosphatidylinositol derived second messenger molecules, which are related to the phospholipase C and phosphoinositide 3-kinase pathways. PITP are ubiquitously expressed proteins that transfer phosphatidylinositol (PI) and phosphatidylcholine (PC) between membranes enriched in PI or PC to membranes that are deficient in PI or PC. PITP mobilizes PI from the endoplasmic reticulum and regulates the release of PI from stored vesicles in the Golgi network. In mammalian cells, three smaller forms of soluble PITP are present, designated PITP α , β and retinal degeneration B (rdgB) β . The gene encoding human rdgB β maps to chromosome 11q13, a region that contains several retinopathy loci, which makes the H-rdgB β gene a candidate for several inherited retinal degenerative diseases.

CHROMOSOMAL LOCATION

Genetic locus: PITPNA (human) mapping to 17p13.3; Pitpna (mouse) mapping to 11 B5.

SOURCE

PITP α (5F12) is a mouse monoclonal antibody raised against native recombinant phosphatidyl inositol transfer protein (PITP) of human origin.

PRODUCT

Each vial contains 200 μ g IgG₁ kappa light chain in 1.0 ml of PBS with < 0.1% sodium azide and 0.1% gelatin.

PITP α (5F12) is available conjugated to agarose (sc-13569 AC), 500 μ g/0.25 ml agarose in 1 ml, for IP; to HRP (sc-13569 HRP), 200 μ g/ml, for WB, IHC(P) and ELISA; to either phycoerythrin (sc-13569 PE), fluorescein (sc-13569 FITC), Alexa Fluor[®] 488 (sc-13569 AF488), Alexa Fluor[®] 546 (sc-13569 AF546), Alexa Fluor[®] 594 (sc-13569 AF594) or Alexa Fluor[®] 647 (sc-13569 AF647), 200 μ g/ml, for WB (RGB), IF, IHC(P) and FCM; and to either Alexa Fluor[®] 680 (sc-13569 AF680) or Alexa Fluor[®] 790 (sc-13569 AF790), 200 μ g/ml, for Near-Infrared (NIR) WB, IF and FCM.

RESEARCH USE

For research use only, not for use in diagnostic procedures.

APPLICATIONS

PITP α (5F12) is recommended for detection of PITP α of mouse, rat and human origin by Western Blotting (starting dilution 1:200, dilution range 1:100-1:1000), immunoprecipitation [1-2 μ g per 100-500 μ g of total protein (1 ml of cell lysate)] and immunofluorescence (starting dilution 1:50, dilution range 1:50-1:500); non cross-reactive with PITP β .

Suitable for use as control antibody for PITP α siRNA (h): sc-40855, PITP α siRNA (m): sc-40856, PITP α shRNA Plasmid (h): sc-40855-SH, PITP α shRNA Plasmid (m): sc-40856-SH, PITP α shRNA (h) Lentiviral Particles: sc-40855-V and PITP α shRNA (m) Lentiviral Particles: sc-40856-V.

Molecular Weight of PITP α : 35 kDa.

Positive Controls: ECV304 cell lysate: sc-2269, RAW 264.7 whole cell lysate: sc-2211 or C6 whole cell lysate: sc-364373.

RECOMMENDED SUPPORT REAGENTS

To ensure optimal results, the following support reagents are recommended: 1) Western Blotting: use m-IgG κ BP-HRP: sc-516102 or m-IgG κ BP-HRP (Cruz Marker): sc-516102-CM (dilution range: 1:1000-1:10000), Cruz Marker[™] Molecular Weight Standards: sc-2035, UltraCruz[®] Blocking Reagent: sc-516214 and Western Blotting Luminol Reagent: sc-2048. 2) Immunoprecipitation: use Protein A/G PLUS-Agarose: sc-2003 (0.5 ml agarose/2.0 ml). 3) Immunofluorescence: use m-IgG κ BP-FITC: sc-516140 or m-IgG κ BP-PE: sc-516141 (dilution range: 1:50-1:200) with UltraCruz[®] Mounting Medium: sc-24941 or UltraCruz[®] Hard-set Mounting Medium: sc-359850.

DATA

PITP α (5F12): sc-13569. Western blot analysis of PITP α expression in RAW 264.7 (A), AMJ2-C8 (B) and C6 (C) whole cell lysates.

PITP α (5F12) HRP: sc-13569 HRP. Direct western blot analysis of PITP α expression in ECV304 (A), RAW 264.7 (B), AMJ2-C8 (C) and C6 (D) whole cell lysates.
