Munc13-2 (R-18): sc-13635

The Power to Question

BACKGROUND

Munc13 proteins (Munc13-1, Munc13-2, and Munc13-3) make up a family of highly homologous synaptic molecules that bind Syntaxin, an essential mediator of neurotransmitter release. Munc13 proteins contain phorbol ester binding C1- and C2-domains, which are regulatory domains for Ca^{2+} , phospholipids and diacylglycerol. Munc13 proteins are primarily expressed by neurons, except for a ubiquitously expressed Munc13-2 splice variant. Munc13-1 is expressed by most neurons; it interacts with the N-terminal of $Doc2\alpha$, which is concentrated on the synaptic vesicle. Munc13-1 also interacts directly with msec7-1 to co-localize the two proteins at the active zone, a presynaptic, subcellular compartment with extremely high membrane turnover. Munc13-1 is essential for synaptic vesicle maturation and plays a role in the central priming function in synaptic vesicle exocytosis from glutamatergic synapses. Munc13-1 is concentrated in presynaptic terminals. Munc13-2 is expressed in rostral regions, whereas Munc13-3 is expressed primarily in the cerebellum.
