

## Sec24B (I-16): sc-160785

### BACKGROUND

Sec24B (SEC24 family, member B), also known as SEC24, is a 1,268 amino acid protein belonging to the Sec24 subfamily of the Sec23/Sec24 protein family. Members of this family participate in vesicle trafficking from the endoplasmic reticulum (ER) to the Golgi apparatus. Sec24B is one of four mammalian proteins, namely Sec24A, Sec24B, Sec24C and Sec24D, that are highly related to the *Saccharomyces cerevisiae* protein Sec24, a component of the coat protein complex COPII that mediates the selective export of membrane proteins from the ER. Similar to its yeast counterpart, Sec24B functions as a component of the cytoplasmic COPII complex. Expressed in hepatocytes, lymphocytes and fibroblasts, Sec24B exists as two alternatively spliced isoforms that localize to cytoplasm, golgi apparatus membrane and endoplasmic reticulum membrane.
