MTO1 (D-12): sc-161114

The Power to Question

BACKGROUND

MT01 (mitochondrial translation optimization 1), also known as CGI-02, is a 717 amino acid mitochondrial protein that belongs to the mnmG family. Expressed ubiquitously with highest expression in tissues which have an elevated metabolic rate, MT01 is involved in mitochondrial tRNA modification, specifically in the 5-carboxymethylaminomethyl modification of wobble uridine bases. Additionally, MT01 is thought to participate in the expression of the aminoglycoside-induced and non-syndromic deafness phenotypes associated with mutations in the 12S rRNA gene, suggesting a possible role for MT01 in the pathogenesis of these deafness-associated conditions. MT01 exists as multiple isoforms that are produced by alternative splicing events.
