

## 2B28 (L-13): sc-161289

### BACKGROUND

MAP (mitogen-activated protein) kinases, also designated stress-activated protein kinases (SAPKs), include p38 $\alpha$  (SAPK2a), p38 $\beta$  (SAPK2b), p38 $\gamma$  (SAPK3) and p38 $\delta$  (SAPK4), and play a significant role in many biological processes, including cell adhesion and spreading, cell differentiation and apoptosis. 2B28, also designated SAPK substrate protein 1 (SAKS1) UBX domain-containing protein 1 (UBXN1), is a 297 amino acid protein that contains one UBA domain and one UBX domain and is a substrate of p38 $\gamma$  and p38 $\delta$ . 2B28 is a component of a complex composed of NGLY1, SAKS1, AMFR, VCP and RAD23B, where it acts as an adapter that directs VCP to polyubiquitinated proteins. 2B28 also interacts with Homer 2, which further suggests role for 2B28 in the regulation of protein degradation by ubiquitin-proteasome systems.
