SSB-3 (L-14): sc-165594

The Power to Question

BACKGROUND

Members of the suppressor of cytokine signaling (SOCS) family of proteins contain C-terminal regions of homology called the SOCS box, which serves to couple SOCS proteins and their binding partners with the Elongin BC complex, thereby mediating protein degradation. Several other families of proteins also contain SOCS boxes, but differ from the SOCS proteins in the type of domain they contain upstream of the SOCS box. SSB-3 (SPRY domain-containing SOCS box protein 3), also known as SPSB3, is a 355 amino acid protein that contains one SOCS box domain a B30.2/SPRY domain. Functioning as a substrate recognition component of the Elongin BC complex, SSB-3 plays a role in the ubiquitination and subsequent proteasomal degradation of target proteins.
