

ZC3H12B (E-13): sc-169835

BACKGROUND

The zinc finger CCCH domain-containing protein 12B (ZC3H12B), also known as MCPIP2 (MCP-induced protein 2), is an 825 amino acid protein that contains one C3H1-type zinc finger and belongs to the ZC3H12 family. ZC3H12B is suggested to function as an RNase, and thereby modifies levels of target RNA. Existing as two alternatively spliced isoforms, ZC3H12B binds magnesium as a cofactor and is expressed in murine fetal heart. The gene encoding ZC3H12B maps to human chromosome Xq12 and mouse chromosome X C3. Chromosome X consists of about 153 million base pairs and nearly 1,000 genes. Color blindness, hemophilia, and Duchenne muscular dystrophy are well known X chromosome-linked conditions which affect males more frequently as males carry a single X chromosome.
