

Fibrinogen β (I-18): sc-18027

BACKGROUND

The plasma glycoprotein Fibrinogen is synthesized in the liver and comprises three structurally different subunits: α , β and γ . Fibrinogen is important in platelet aggregation, the final step of the coagulation cascade (i.e., the formation of Fibrin) and determination of plasma viscosity and erythrocyte aggregation. It is both constitutively expressed and inducible during an acute phase reaction. Hemostasis following tissue injury deploys essential plasma procoagulants (Prothrombin and Factors X, IX, V and VIII), which are involved in a blood coagulation cascade leading to the formation of insoluble Fibrin clots and the promotion of platelet aggregation. Following vascular injury, Fibrinogen is cleaved by Thrombin to form Fibrin, which is the most abundant component of blood clots. The cleavage products of Fibrinogen regulate cell adhesion and spreading, display vasoconstrictor and chemotactic activities, and are mitogens for several cell types.

CHROMOSOMAL LOCATION

Genetic locus: FGB (human) mapping to 4q31.3; Fgb (mouse) mapping to 3 E3.

SOURCE

Fibrinogen β (I-18) is an affinity purified goat polyclonal antibody raised against a peptide mapping within an internal region of Fibrinogen β of human origin.

PRODUCT

Each vial contains 200 μ g IgG in 1.0 ml of PBS with < 0.1% sodium azide and 0.1% gelatin.

Blocking peptide available for competition studies, sc-18027 P, (100 μ g peptide in 0.5 ml PBS containing < 0.1% sodium azide and 0.2% BSA).

STORAGE

Store at 4° C, ****DO NOT FREEZE****. Stable for one year from the date of shipment. Non-hazardous. No MSDS required.

APPLICATIONS

Fibrinogen β (I-18) is recommended for detection of Fibrinogen β of mouse, rat and human origin by Western Blotting (starting dilution 1:200, dilution range 1:100-1:1000), immunoprecipitation [1-2 μ g per 100-500 μ g of total protein (1 ml of cell lysate)], immunofluorescence (starting dilution 1:50, dilution range 1:50-1:500) and solid phase ELISA (starting dilution 1:30, dilution range 1:30-1:3000).

Fibrinogen β (I-18) is also recommended for detection of Fibrinogen β in additional species, including equine, canine, bovine and porcine.

Suitable for use as control antibody for Fibrinogen β siRNA (h): sc-37096, Fibrinogen β siRNA (m): sc-37097, Fibrinogen β shRNA Plasmid (h): sc-37096-SH, Fibrinogen β shRNA Plasmid (m): sc-37097-SH, Fibrinogen β shRNA (h) Lentiviral Particles: sc-37096-V and Fibrinogen β shRNA (m) Lentiviral Particles: sc-37097-V.

Molecular Weight of Fibrinogen β : 67 kDa.

Positive Controls: c4 whole cell lysate: sc-364186.

DATA
