## BACKGROUND

During development, genetically distinct subtypes of motor neurons express unique combinations of LIM-type homeodomain factors, which regulate cell migration and guide motor axons to establish the fidelity of a binary choice in axonal trajectory. The LIM gene family encodes a set of gene products, which carry the LIM domain, a unique cysteine-rich zinc-binding domain. At least 40 members of this family have been identified in vertebrates and invertebrates, and are distributed into 4 groups according to the number of LIM domains and to the presence of homeodomains and kinase domains. The overlapping expression of LHX1, LHX3, LHX4, Isl-1 and |sl-2 in developing motorneurons along the spinal column may influence the establishment of specific motorneuron subtypes. The human LHX1 gene maps to chromosome 17q12 and encodes a 384 amino acid protein. The human LHX1 transcript is assembled from five exons, which are separated by introns ranging in size from 93 nt to 2.3 kb . The two LIM domains are entirely contained in the first and second exons, respectively, while the homeodomain is split into exons three and four.

## CHROMOSOMAL LOCATION

Genetic locus: LHX1 (human) mapping to 17q12; Lhx1 (mouse) mapping to 11 C .

## SOURCE

LHX1 (S-20) is an affinity purified goat polyclonal antibody raised against a peptide mapping within an internal region of LHX1 of human origin.

## PRODUCT

Each vial contains $200 \mu \mathrm{glgG}$ in 1.0 ml of PBS with $<0.1 \%$ sodium azide and $0.1 \%$ gelatin. Also available as TransCruz reagent for Gel Supershift and ChIP applications, sc-19339 X, $200 \mu \mathrm{~g} / 0.1 \mathrm{ml}$.
Blocking peptide available for competition studies, sc-19339 P, ( $100 \mu \mathrm{~g}$ peptide in 0.5 ml PBS containing $<0.1 \%$ sodium azide and $0.2 \% \mathrm{BSA}$ ).

## STORAGE

Store at $4^{\circ} \mathrm{C},{ }^{* *}$ DO NOT FREEZE**. Stable for one year from the date of shipment. Non-hazardous. No MSDS required.

## APPLICATIONS

LHX1 (S-20) is recommended for detection of LHX1 of mouse, rat and human origin by Western Blotting (starting dilution 1:200, dilution range 1:1001:1000), immunoprecipitation [ $1-2 \mu \mathrm{~g}$ per 100-500 $\mu \mathrm{g}$ of total protein ( 1 ml of cell lysate)], immunofluorescence (starting dilution 1:50, dilution range 1:501:500) and solid phase ELISA (starting dilution 1:30, dilution range 1:301:3000).

LHX1 (S-20) is also recommended for detection of LHX1 in additional species, including canine, bovine, porcine and avian.
Suitable for use as control antibody for LHX1 siRNA (h): sc-38708, LHX1 siRNA (m): sc-38709, LHX1 shRNA Plasmid (h): sc-38708-SH, LHX1 shRNA Plasmid (m): sc-38709-SH, LHX1 shRNA (h) Lentiviral Particles: sc-38708-V and LHX1 shRNA (m) Lentiviral Particles: sc-38709-V.

LHX1 (S-20) X TransCruz antibody is recommended for Gel Supershift and ChIP applications.
Molecular Weight of LHX1: 45 kDa .
Positive Controls: LHX1 (h): 293T Lysate: sc-369850.

## DATA

LHX1 (S-20): sc-19339. Western blot analysis of LHX1
expression in non-transfected: sc-117752 (A) and
human LHX1 transfected: sc-369850 (B) 293T whole cell lysates.

## RESEARCH USE

For research use only, not for use in diagnostic procedures.

## PROTOCOLS

See our web site at www.scbt.com or our catalog for detailed protocols and support products.

Try LHX1 (2A8): sc-293475, our highly recommended monoclonal alternative to LHX1 (S-20).
