SANTA CRUZ BIOTECHNOLOGY, INC.

pki α (N-20): sc-1943

BACKGROUND

The second messenger cyclic AMP (cAMP) mediates a diverse array of cellular responses such as proliferation, ion transport, regulation of metabolism and gene transcription by activating the cAMP-dependent protein kinase (cAPK or PKA). Activation of PKA occurs when cAMP binds to the two regulatory subunits of tetrameric PKA, resulting in the release of two active catalytic subunits. Two forms of a specific PKA inhibitor molecule, designated pki α and pki β , have been described and are suggested to regulate PKA activity in different portions of the central nervous system. For instance, pki α is expressed abundantly in the adult mouse brain, particularly in the cerebellum, hypothalamus, hippocampus and cortex. In constrast, pki β is present at a much lower level in most brain regions. pki β is found in significant amounts only in the cerebellum and in a few distinct nuclei within the pons, medulla and hypothalamus.

CHROMOSOMAL LOCATION

Genetic locus: PKIA (human) mapping to 8q21.12; Pkia (mouse) mapping to 3 A1.

SOURCE

pki α (N-20) is an affinity purified goat polyclonal antibody raised against a peptide mapping at the N-terminus of pki α of human origin.

PRODUCT

Each vial contains 200 μg IgG in 1.0 ml of PBS with < 0.1% sodium azide and 0.1% gelatin.

Blocking peptide available for competition studies, sc-1943 P, (100 μ g peptide in 0.5 ml PBS containing < 0.1% sodium azide and 0.2% BSA).

STORAGE

Store at 4° C, **D0 NOT FREEZE**. Stable for one year from the date of shipment. Non-hazardous. No MSDS required.

APPLICATIONS

pki α (N-20) is recommended for detection of pki α of mouse, rat and human origin by Western Blotting (starting dilution 1:200, dilution range 1:100-1:1000), immunoprecipitation [1-2 µg per 100-500 µg of total protein (1 ml of cell lysate)], immunofluorescence (starting dilution 1:50, dilution range 1:50-1:500), immunohistochemistry (including paraffin-embedded sections) (starting dilution 1:50, dilution range 1:50-1:500) and solid phase ELISA (starting dilution 1:30, dilution range 1:30-1:3000).

pki α (N-20) is also recommended for detection of pki α in additional species, including equine, canine, bovine, porcine and avian.

Suitable for use as control antibody for pki α siRNA (h): sc-44021, pki α siRNA (m): sc-60045, pki α shRNA Plasmid (h): sc-44021-SH, pki α shRNA Plasmid (m): sc-60045-SH, pki α shRNA (h) Lentiviral Particles: sc-44021-V and pki α shRNA (m) Lentiviral Particles: sc-60045-V.

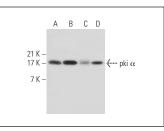

Molecular Weight of pki a: 8 kDa.

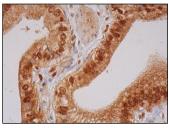

Positive Controls: HEK293 whole cell lysate: sc-45136, HeLa whole cell lysate: sc-2200 or K-562 whole cell lysate: sc-2203.

RECOMMENDED SECONDARY REAGENTS

To ensure optimal results, the following support (secondary) reagents are recommended: 1) Western Blotting: use donkey anti-goat IgG-HRP: sc-2020 (dilution range: 1:2000-1:100,000) or Cruz Marker[™] compatible donkey anti-goat IgG-HRP: sc-2033 (dilution range: 1:2000-1:5000), Cruz Marker[™] Molecular Weight Standards: sc-2035, TBS Blotto A Blocking Reagent: sc-2333 and Western Blotting Luminol Reagent: sc-2048. 2) Immunoprecipitation: use Protein A/G PLUS-Agarose: sc-2003 (0.5 ml agarose/2.0 ml). 3) Immunofluorescence: use donkey anti-goat IgG-FITC: sc-2024 (dilution range: 1:100-1:400) or donkey anti-goat IgG-TR: sc-2783 (dilution range: 1:100-1:400) with UltraCruz[™] Mounting Medium: sc-24941. 4) Immuno-histochemistry: use ImmunoCruz[™]: sc-2053 or ABC: sc-2023 goat IgG Staining Systems.

DATA

pki α (N-20): sc-1943. Western blot analysis of pki α expression in HEK293 (A), HeLa (B), IMR-32 (C) and K-562 (D) whole cell lysates.

pki α (N-20): sc-1943. Immunoperoxidase staining of formalin fixed, paraffin-embedded human gall bladder tissue showing cytoplasmic and nuclear staining of glandular cells.

RESEARCH USE

For research use only, not for use in diagnostic procedures.
