

CWF19L1 (L-16): sc-242527

BACKGROUND

CWF19L1 (CWF19-like 1, cell cycle control) is a 538 amino acid protein belonging to the CWF19 family and exists as three alternatively spliced isoforms. CWF19L1 is encoded by a gene located on human chromosome 10, which spans nearly 135 million base pairs, makes up approximately 4.5% of total DNA in cells and encodes nearly 1,200 genes. Several protein-coding genes, including those that encode for chemokines, cadherins, excision repair proteins, early growth response factors (Egrs) and fibroblast growth receptors (FGFRs), are located on chromosome 10. Defects in some of the genes that map to chromosome 10 are associated with Charcot-Marie Tooth disease, Jackson-Weiss syndrome, Usher syndrome, nonsyndromic deafness, Wolman's syndrome, Cowden syndrome, multiple endocrine neoplasia type 2 and porphyria.
