The Power to Question

## BACKGROUND

A large protein group known as the tubulin tyrosine ligase-like (TTLL) family is implied to catalyze ligations of amino acids to tubulins and other substrates. Each member contains a characteristic TTL domain. TTLL13 (tubulin tyrosine ligase-like family, member 13) is a 815 amino acid protein that belongs to the tubulin—tyrosine ligase family. Containing one TTL domain, TTLL13 may act as a tubulin polyglutamylase that forms polyglutamate side chains on tubulin. TTLL13 exists as 2 alternatively spliced isoforms and is encoded by a gene located on human chromosome 15q26.1. Encoding more than 700 genes, chromosome 15 is made up of approximately 106 million base pairs and is about 3% of the human genome.
