

# CXorf30 (N-15): sc-246353

## BACKGROUND

CXorf30 (chromosome X open reading frame 30) is a 633 amino acid uncharacterized protein encoded by a gene located on human chromosome X. Human chromosome X contains nearly 153 million base pairs and houses over 1,000 genes. In conjunction with chromosome Y, chromosome X is responsible for sex determination, as an X and a Y chromosome lead to normal male development, while two copies of an X chromosome lead to normal female development. There are a number of conditions related to an abnormal number and combination of sex chromosomes, some of which include Turner's syndrome, color blindness, hemophilia and Duchenne muscular dystrophy.
