# β-defensin 114 (C-11): sc-246416

The Power to Question

#### **BACKGROUND**

 $\beta$ -defensins (also designated BDs, or hBDs in human) are small cationic peptides with broad-spectrum antimicrobial activity against a variety of enveloped viruses, fungi and bacteria. Produced in mucosal epithelia and neutrophils of several species,  $\beta$ -defensins are developmentally regulated. The family of  $\beta$ -defensin proteins share a common defensin-motif that is characterized by multiple cysteine residues and a highly conserved tertiary structure. Besides playing a significant role in host immune defense, many  $\beta$ -defensins also are involved in sperm maturation and capacitation.  $\beta$ -defensin 114 is a 69 amino acid secreted protein that has antibacterial activity.
