DAAO (C-15): sc-26077

BACKGROUND

D-amino acid oxidase (DAAO) metabolizes exogenous D-amino acids that accumulate during aging, and may modulate the level of D-serine in the brain, acting as a detoxifying agent. DAAO is specific for the D-configuration of amino acids and exhibits a preference for those with small, hydrophobic side chains and polar, aromatic and basic functional groups. Single base-pair substitutions at certain amino acid residues of the DAAO enzyme result in the loss of DAO activity in mice. Mutation of the enzyme at residue Y238, one of the few conserved residues in the active site of DAAO, leads to a significantly slower rate of product release relative to the wild-type enzyme, indicating the importance of this residue in controlling access to the active site. In addition, the other conserved residues in the active site of DAAO do not play a role in acid-base catalysis but rather are involved in substrate interactions, which along with the mode of substrate orientation into the active site, suggest a hybrid transfer type of mechanism for catalysis.

CHROMOSOMAL LOCATION

Genetic locus: DAO (human) mapping to 12q24.11; Dao (mouse) mapping to 5 F.

SOURCE

DAA0 (C-15) is an affinity purified goat polyclonal antibody raised against a peptide mapping near the C-terminus of DAA0 of human origin.

PRODUCT

Each vial contains 200 μg IgG in 1.0 ml of PBS with < 0.1% sodium azide and 0.1% gelatin.

Blocking peptide available for competition studies, sc-26077 P, (100 μ g peptide in 0.5 ml PBS containing < 0.1% sodium azide and 0.2% BSA).

APPLICATIONS

DAA0 (C-15) is recommended for detection of DAA0 of human and, to a lesser extent, mouse and rat origin by Western Blotting (starting dilution 1:200, dilution range 1:100-1:1000), immunoprecipitation [1-2 μ g per 100-500 μ g of total protein (1 ml of cell lysate)], immunofluorescence (starting dilution 1:50, dilution range 1:50-1:500), immunohistochemistry (including paraffin-embedded sections) (starting dilution 1:50, dilution range 1:50-1:500) and solid phase ELISA (starting dilution 1:30, dilution range 1:30-1:3000).

DAA0 (C-15) is also recommended for detection of DAA0 in additional species, including equine.
