

# UltraCruz Equine Zeolite Silicon Formula™

strong bones for a healthy horse

A natural source of Silicon, which supports bone formation and calcification. Silicon is a trace element that is crucial for equine cartilage and connective tissue formation.

## WHAT IS ZEOLITE?

Zeolite is a source of silicon (over 60% silicon) that can be broken down and absorbed by the horse's stomach. Silicon is a trace element that stimulates bone formation and is a key component of substances such as Hyaluronic Acid (HA), which cushions and lubricates the joints. Silicon is incredibly important to the formation of articular cartilage and connective tissue, and facilitates proper bone formation and calcification. It increases osteoblastic (bone building) activity, while simultaneously decreasing osteoclastic (bone demineralization) activity. This helps to strengthen your horse's bones and reduce the chance of bone injury.

## UltraCruz Equine Zeolite Silicon Formula™

### Silicon Supplement for Bone Development

UltraCruz Equine Zeolite Silicon Supplement™ is a natural source of Silicon, a trace element that supports healthy cartilage and connective tissue formation. Silicon may support bone formation and calcification. Zeolite, a natural compound which contains more than 60% Silicon, helps to increase plasma silicon concentration and bone density, which is beneficial for bone injury prevention.

**That's the UltraCruz™ Advantage!**

### Ingredients in Action

In 1993, Texas A&M University conducted a study with 47 Quarter Horses. They supplemented the Quarter Horses' diets with Zeolite Silicon from 6 months of age, and, at 18 months of age, they began their race training. After a 9 week training period, the horses were raced every two weeks for 18 weeks (9 races). Lead Researcher Dr. Brian D. Nielsen stated that the purpose of this study was to examine whether feeding Zeolite "would increase the distance traveled and strides taken before young horses in race training experience racing related injuries." During these 18 weeks of racing, the horses were timed for distance and their strides were measured and counted. Dr. Nielsen found that by feeding Zeolite, they "were able to reduce injury rates dramatically." Horses with no Zeolite supplementation traveled 49,503 miles before an injury occurred, with 8 of 13 non-supplemented horses experiencing injuries (3 of which with fractured sesamoids). The horses with a mid-range supplementation of Zeolite traveled a total of 90,438 miles before an injury occurred. Try our **UltraCruz Equine Zeolite Silicon Supplement™** to see these amazing results for yourself!

GREAT VALUE

**INGREDIENTS** (per recommended daily dosage—2 scoops, 180 g):

Silicon (180 g) and Natural Apple Powder

### RECOMMENDATIONS FOR USE:

Feed 1 level scoop (90 g) twice daily. Servings based on an average horse weight of 1,000 pounds. Recommended for use within 18 months of manufacture date on label.

Available only from Santa Cruz Animal Health.

Which supplement is right for your horse?

Let our experienced Animal Health team help you choose the perfect supplement to fit your needs.
