

# goat anti-rat IgG, F(ab')<sub>2</sub>-APC: sc-3832

## BACKGROUND

Santa Cruz Biotechnology's secondary antibodies are available conjugated to either an enzyme, biotin or fluorophore for use in a variety of antibody-based applications including Western Blot, immunostaining, flow cytometry and ELISA. Secondary antibodies are commonly affinity purified against immobilized whole IgG or against antibody fragments such as the Fc or F(ab')<sub>2</sub> regions. Santa Cruz Biotechnology offers an extensive selection of F(ab')<sub>2</sub> specific secondary antibodies for immunohistochemistry and flow cytometry that are non-conjugated or labeled with either AP (alkaline phosphatase), fluorescein, biotin, FITC (fluorescein isothiocyanate), Texas Red<sup>®</sup>, TRITC (tetra-methyl rhodamine isothiocyanate), PE (phycoerythrin), PE-Cy5 (phycoerythrin with cyanin-5), PE-Cy7 (phycoerythrin with cyanin-7), APC (allophycocyanin), APC-Cy7 and (allophycocyanin with cyanin-7). F(ab')<sub>2</sub> secondary antibodies are specific for commonly used primary antibody species, including goat, rabbit, mouse and rat, and are recommended for reducing non-specific secondary antibody binding to Fc receptors on the cell surface.

## SOURCE

goat anti-rat IgG, F(ab')<sub>2</sub>-APC is an affinity purified pre-adsorbed, F(ab')<sub>2</sub> fragment secondary antibody raised in goat against rat IgG and conjugated to APC (allophycocyanin).

## PRODUCT

Each vial contains 200 µg goat IgG (pre-adsorbed with human IgG) in 0.5 ml of PBS containing 0.1% gelatin and 0.1% sodium azide.

## APPLICATIONS

goat anti-rat IgG, F(ab')<sub>2</sub>-APC is recommended for detection of rat IgG by immunofluorescence staining (starting dilution: 1:100, dilution range: 1:100-1:400), immunohistochemical staining (starting dilution: 1:100, dilution range: 1:100-1:400) and flow cytometry (0.5-1 µg per 1 x 10<sup>6</sup> cells). Recommended for use when trying to avoid non-specific secondary antibody binding to Fc receptors on cell surfaces.
