KPI-2 (D-11): sc-398396

BACKGROUND

KPI-2 (kinase/phosphatase/inhibitor 2), also known as BREK, LMR2, cprk, AATYK2 or LMTK2 (lemur tyrosine kinase 2), is a 1,503 amino acid single-pass membrane protein belonging to the protein kinase superfamily and the protein tyrosine kinase family. Mainly expressed in skeletal muscle, and weakly in brain and pancreas, KPI-2 contains N-terminal transmembrane helices and a long C-terminal cytoplasmic tail with serine/threonine/tyrosine kinase activity. KPI-2 may be involved in nerve growth factor (NGF)-Trk A signaling, endosomal membrane trafficking and spermatogenesis. KPI-2 localizes to cytoplasmic membrane vesicles and to perinuclear recycling endosomes. KPI-2 is critical for the transition of endocytosed membrane vesicles from early endosomes to recycling endosomes. The gene encoding KPI-2 is a potential therapeutic target for prostate cancer.
