

## Act1 (1-300): sc-4288 WB

### BACKGROUND

Members of the NF $\kappa$ B family of transcription factors are important in regulating the expression of various cellular and viral genes involved in immune and inflammatory responses, cell survival, and stress responses. IL-1, TNF- $\alpha$ , and other related signaling pathways activate transcription factors through the activation of JNK. The NF $\kappa$ B signaling pathway converges with the signal-induced activation of JNK upstream of IKK. Isolated from the human embryonic kidney (HEK) 293 cell line, Act1 is an IKK $\gamma$ -associated protein that activates both NF $\kappa$ B and JNK constitutively. Act1 may function as a coordinator between two stress-induced signaling pathways.

### SOURCE

Act1 (1-300) is expressed in *E. coli* as a 62 kDa tagged fusion protein corresponding to amino acids 1-300 mapping at the amino terminus of Act1 of human origin.

### PRODUCT

Act1 (1-300) is purified from bacterial lysates (>98%) by glutathione agarose affinity chromatography; supplied as 10  $\mu$ g in 0.1 ml SDS-PAGE loading buffer.

### APPLICATIONS

Act1 (1-300) is suitable as a Western blotting control for sc-11444.

### STORAGE

Store at -20° C; stable for one year from the date of shipment.

### RESEARCH USE

For research use only, not for use in diagnostic procedures.
