

NSD2 (N-20): sc-50148

BACKGROUND

The WHSC1 gene encodes the NSD2 protein, which contains four domains present in other developmental proteins: a PWWP domain, an HMG box, a SET domain and a PHD-type zinc finger. Wolf-Hirschhorn syndrome (WHS) is a malformation syndrome associated with a hemizygous deletion of the distal short arm of chromosome 4. The WHSC1 gene maps to the 165 kb WHS critical region, therefore implying that the gene may be responsible for several of the phenotypic features of WHS, such as mental retardation, microcephaly, seizures, hypotonia, cleft lip and/or palate, strabismus, hypertelorism, downturned "fishlike" mouth, short upper lip and philtrum, small chin, ear tags or pits, and cranial asymmetry. NSD2 is expressed ubiquitously in rapidly growing embryonic tissues, a pattern which corresponds to affected organs in WHS patients. Alternative splicing of the WHSC1 gene results in multiple transcript variants encoding different isoforms of NSD2.

CHROMOSOMAL LOCATION

Genetic locus: WHSC1 (human) mapping to 4p16.3; Whsc1 (mouse) mapping to 5 B2.

SOURCE

NSD2 (N-20) is an affinity purified goat polyclonal antibody raised against a peptide mapping near the N-terminus of NSD2 of human origin.

PRODUCT

Each vial contains 200 µg IgG in 1.0 ml of PBS with < 0.1% sodium azide and 0.1% gelatin.

Blocking peptide available for competition studies, sc-50148 P, (100 µg peptide in 0.5 ml PBS containing < 0.1% sodium azide and 0.2% BSA).

STORAGE

Store at 4° C, ****DO NOT FREEZE****. Stable for one year from the date of shipment. Non-hazardous. No MSDS required.

RESEARCH USE

For research use only, not for use in diagnostic procedures.

APPLICATIONS

NSD2 (N-20) is recommended for detection of NSD2 of mouse, rat and human origin by Western Blotting (starting dilution 1:200, dilution range 1:100-1:1000), immunofluorescence (starting dilution 1:50, dilution range 1:50-1:500), immunohistochemistry (including paraffin-embedded sections) (starting dilution 1:50, dilution range 1:50-1:500) and solid phase ELISA (starting dilution 1:30, dilution range 1:30-1:3000).

NSD2 (N-20) is also recommended for detection of NSD2 in additional species, including equine, canine, bovine, porcine and avian.

Suitable for use as control antibody for NSD2 siRNA (h): sc-61233, NSD2 siRNA (m): sc-61234, NSD2 shRNA Plasmid (h): sc-61233-SH, NSD2 shRNA Plasmid (m): sc-61234-SH, NSD2 shRNA (h) Lentiviral Particles: sc-61233-V and NSD2 shRNA (m) Lentiviral Particles: sc-61234-V.

Molecular Weight of NSD2: 152 kDa.

RECOMMENDED SECONDARY REAGENTS

To ensure optimal results, the following support (secondary) reagents are recommended: 1) Western Blotting: use donkey anti-goat IgG-HRP: sc-2020 (dilution range: 1:2000-1:100,000) or Cruz Marker™ compatible donkey anti-goat IgG-HRP: sc-2033 (dilution range: 1:2000-1:5000), Cruz Marker™ Molecular Weight Standards: sc-2035, TBS Blotto A Blocking Reagent: sc-2333 and Western Blotting Luminol Reagent: sc-2048. 2) Immunofluorescence: use donkey anti-goat IgG-FITC: sc-2024 (dilution range: 1:100-1:400) or donkey anti-goat IgG-TR: sc-2783 (dilution range: 1:100-1:400) with UltraCruz™ Mounting Medium: sc-24941. 3) Immunohistochemistry: use ImmunoCruz™: sc-2053 or ABC: sc-2023 goat IgG Staining Systems.

DATA

NSD2 (N-20): sc-50148. Immunoperoxidase staining of formalin fixed, paraffin-embedded human bone marrow tissue showing nuclear and cytoplasmic staining of hematopoietic cells.

PROTOCOLS
