

# SUHW1 (H-3): sc-515056

## BACKGROUND

Zinc-finger proteins contain DNA-binding domains and have a wide variety of functions, most of which encompass some form of transcriptional activation or repression. The majority of zinc-finger proteins contain a Krüppel-type DNA binding domain and a KRAB domain, which is thought to interact with KAP1, thereby recruiting histone modifying proteins. SUHW1 (suppressor of hairy wing homolog 1), also known as ZNF280A (zinc finger protein 280A), 3'Y11.1, ZNF636 or ZNF280, is a 542 amino acid protein that contains 4 C<sub>2</sub>H<sub>2</sub>-type zinc fingers. Localized to the nucleus, SUHW1 is thought to function as a transcription factor that may mediate transcriptional regulation events.
