SANTA CRUZ BIOTECHNOLOGY, INC.

IFN-γ (F-3): sc-52673

BACKGROUND

Interferon (IFN)- γ is an antiviral and antiparasitic agent produced by CD4+/ CD8+ lymphocytes and natural killer cells that undergo activation by antigens, mitogens or alloantigens. IFN- γ production modulates T cell growth and differentiation and inhibits the growth of B cells. Synthesis of IFN- γ is inducible by IL-2, FGF and EGF. The active form of IFN- γ is a homodimer with each subunit containing six helices. The dimeric structure of human IFN- γ is stabilized by non-covalent interactions through the interface of the helices. IFN- γ translated precursor is 166 amino acids, including the 23 amino acid secretory sequence. Multiple forms exist due to variable glycosylation and under non-denaturing conditions due to dimers and tetramers.

CHROMOSOMAL LOCATION

Genetic locus: Ifng (mouse) mapping to 10 D2.

SOURCE

IFN-γ (F-3) is a rat monoclonal antibody raised against IFN-γ of mouse origin.

PRODUCT

Each vial contains 100 $\mu g~lg G_{2a}$ in 1.0 ml of PBS with < 0.1% sodium azide and 0.1% gelatin.

RESEARCH USE

For research use only, not for use in diagnostic procedures.

APPLICATIONS

IFN- γ (F-3) is recommended for detection of recombinant and native IFN- γ of mouse origin by immunoprecipitation [1-2 µg per 100-500 µg of total protein (1 ml of cell lysate)].

Suitable for use as control antibody for IFN- γ siRNA (m): sc-39607, IFN- γ shRNA Plasmid (m): sc-39607-SH and IFN- γ shRNA (m) Lentiviral Particles: sc-39607-V.

Molecular Weight of IFN-y: 20-25 kDa.

SELECT PRODUCT CITATIONS

Kim, A., et al. 2016. Supplementation with *Angelica keiskei* inhibits expression of inflammatory mediators in the gastric mucosa of *Helicobacter pylori*-infected mice. Nutr. Res. 36: 488-497.

STORAGE

Store at 4° C, **DO NOT FREEZE**. Stable for one year from the date of shipment. Non-hazardous. No MSDS required.

PROTOCOLS

See our web site at www.scbt.com for detailed protocols and support products.
