BACKGROUND

FLIP (FLICE inhibitory protein) is expressed as both long and short forms and is involved in the regulation of apoptosis. The short form of FLIP contains two death effector domains homologous to the death effector domain of the Fas-associated protein FADD. The long form of FLIP, which shares significant homology with the cysteine protease FLICE, contains an additional caspase-like domain, but lacks a catalytic active site and lacks the residues that form the substrate binding pocket in most caspases. FLIP has been designated by independent groups as Casper, I-FLICE, CLARP, FLAME-1 and MRIT. Although its exact role is still being elucidated, FLIP appears to be an important factor in the regulation of apoptosis downstream of all known death receptors.

CHROMOSOMAL LOCATION

Genetic locus: CFLAR (human) mapping to 2q33.1; Cflar (mouse) mapping to 1 C1.3.

SOURCE

FLIP S/L (G-11) is a mouse monoclonal antibody raised against amino acids 1-202 of FLIP of human origin.

PRODUCT

Each vial contains 200 µg IgG1 kappa light chain in 1.0 ml of PBS with < 0.1% sodium azide and 0.1% gelatin.

FLIP S/L (G-11) is available conjugated to agarose (sc-5276 AC), 500 µg/0.25 ml agarose in 1 ml, for IP; to HRP (sc-5276 HRP), 200 µg/ml, for WB, IHC(P) and ELISA; and to either phycoerythrin (sc-5276 PE), fluorescein (sc-5276 FITC), Alexa Fluor® 488 (sc-5276 AF488) or Alexa Fluor® 647 (sc-5276 AF647), 200 µg/ml, for IF, IHC(P) and FCM.

FLIP S/L: Western blot analysis of FLIP S/L expression in SW480 (A), Jurkat (B) and CTLL-2 (C) whole cell lysates.

APPLICATIONS

FLIP S/L (G-11) is recommended for detection of FLIP short and FLIP long of mouse, rat and human origin by Western Blotting (starting dilution 1:200, dilution range 1:100-1:1000), immunoprecipitation (1-2 µg per 100-500 µg of total protein (1 ml of cell lysate)), immunofluorescence (starting dilution 1:50, dilution range 1:50-1:500) and solid phase ELISA (starting dilution 1:30, dilution range 1:30-1:3000). Suitable for use as control antibody for FLIP S/L siRNA (h): sc-35388, FLIP S/L siRNA (m): sc-35389, FLIP S/L shRNA Plasmid (h): sc-35388-Rsi-FLIP S/L shRNA Plasmid (m): sc-35389-Rsi-FLIP S/L shRNA (h) Lentiviral Particles: sc-35388-V and FLIP S/L shRNA (m) Lentiviral Particles: sc-35389-V.

Molecular Weight of FLIP S/L: 28/55 kDa.

Positive Controls: SW480 cell lysate: sc-2219, Jurkat whole cell lysate: sc-2204 or FLIP S/L (h2): 23T Lysate: sc-170479.

RESEARCH USE

For research use only, not for use in diagnostic procedures.
