

CD22 (OX97): sc-53032

BACKGROUND

The B lymphocyte specific CD22 antigen, also designated B lymphocyte cell adhesion molecule (BLCAM), sialic acid-binding Ig-like lectin 2 (Siglec-2) and Leu-14, is a type I integral membrane glycoprotein, structurally similar to other cell adhesion molecules (CAMs), which acts as a regulator of B cell signaling. CD22 is expressed as both a cytoplasmic and membrane protein during discrete stages of B cell lymphocyte differentiation. The cytoplasmic form of CD22, expressed early in B cell development, is a useful marker for acute lymphocytic leukemia. The membrane form of CD22 is expressed in mature B cells prior to their differentiation into plasma cells. Alternative splicing results in two different isoforms, CD22 α and CD22 β . The CD22 β monomer is the principally occurring isoform but CD22 also appears as a heterodimer of CD22 β and the shorter isoform, CD22 α .

CHROMOSOMAL LOCATION

Genetic locus: Cd22 (mouse) mapping to 7 B1.

SOURCE

CD22 (OX97) is a rat monoclonal antibody raised against CD22 of mouse origin.

PRODUCT

Each vial contains 200 μ g IgG₁ in 1.0 ml of PBS with < 0.1% sodium azide and 0.1% gelatin.

CD22 (OX97) is available conjugated to either phycoerythrin (sc-53032 PE) or fluorescein (sc-53032 FITC), 200 μ g/ml, for IF, IHC(P) and FCM.

APPLICATIONS

CD22 (OX97) is recommended for detection of domain 2 of cell surface glycoprotein CD22 of mouse origin by flow cytometry (1 μ g per 1×10^6 cells).

Suitable for use as control antibody for CD22 siRNA (m): sc-29806, CD22 shRNA Plasmid (m): sc-29806-SH and CD22 shRNA (m) Lentiviral Particles: sc-29806-V.

Molecular Weight of CD22: 130 kDa.

STORAGE

Store at 4° C, ****DO NOT FREEZE****. Stable for one year from the date of shipment. Non-hazardous. No MSDS required.

RESEARCH USE

For research use only, not for use in diagnostic procedures.

PROTOCOLS

See our web site at www.scbt.com for detailed protocols and support products.
