# HA-Tag (153): sc-53516

The Power to Question

#### **BACKGROUND**

Plasmid vectors for the expression of coding regions of eukaryotic genes in bacterial, insect and mammalian hosts are in common usage; such expression vectors are frequently used to encode hybrid fusion proteins consisting of a eukaryotic target protein and a specialized region designed to aid in the purification and visualization of the target protein. For example, the pCDM8 expression vector and derivatives thereof encode fusions between the target protein and an 11 amino acid peptide derived from the influenza protein hemagglutinin (HA). The HA epitope tag is useful in Western blotting and immunohistochemical localization of expressed fusion proteins when examined with antibodies raised specifically against the HA-epitope tag.

#### **SOURCE**

HA-Tag (153) is a rat monoclonal antibody raised against the HA peptide derived from influenza hemagglutinin.

### **PRODUCT**

Each vial contains 200  $\mu g$   $lgG_{2a}$  in 1.0 ml of PBS with < 0.1% sodium azide and 0.1% gelatin.

HA-Tag (153) is available conjugated to either Alexa Fluor  $^{\circ}$  488 (sc-53516 AF488) or Alexa Fluor  $^{\circ}$  647 (sc-53516 AF647), 200  $\mu g/ml$ , for WB (RGB), IF, IHC(P) and FCM.

Alexa Fluor® is a trademark of Molecular Probes, Inc., Oregon, USA

### **APPLICATIONS**

HA-Tag (153) is recommended for detection of proteins containing the HA tag by Western Blotting (starting dilution 1:200, dilution range 1:100-1:1000), immunoprecipitation [1-2  $\mu g$  per 100-500  $\mu g$  of total protein (1 ml of cell lysate)], immunofluorescence (starting dilution 1:50, dilution range 1:50-1:500) and flow cytometry (1  $\mu g$  per 1 x  $10^6$  cells).

## **RESEARCH USE**

For research use only, not for use in diagnostic procedures.

#### **STORAGE**

Store at 4° C, \*\*DO NOT FREEZE\*\*. Stable for one year from the date of shipment. Non-hazardous. No MSDS required.
