

Rabies Virus (6041): sc-58185

BACKGROUND

Rabies virus (neurotropic lyssavirus) is a member of the Rhabdoviridae family. Rabies is a single stranded, neurotropic, negative sense RNA virus whose genome encodes five proteins: a glycoprotein, a nucleoprotein and three other proteins. The mature virus is bullet shaped and has a protein coat with a lipid envelope. The outer surface of the virus is covered with thumb-like glycoprotein projections that are 5-10 nm long and 3 nm in diameter. The length of the virus averages approximately 780 nm. The ability of the Rabies Virus to infect hosts is destroyed by lipid solvents. Rabies is a very successful virus, with a broad range of susceptible hosts. Rabies Virus causes an acute central nervous system infection, characterized by CNS irritation, followed by paralysis and death. Approximately 50,000 human deaths each year are caused by Rabies Virus.

SOURCE

Rabies Virus (6041) is a mouse monoclonal antibody raised against Rabies Virus surface glycoprotein.

RESEARCH USE

For research use only, not for use in diagnostic procedures.

PRODUCT

Each vial contains 100 µg IgG_{2a} in 1.0 ml of PBS with < 0.1% sodium azide and 0.1% gelatin.

APPLICATIONS

Rabies Virus (6041) is recommended for detection of Rabies Virus by immunofluorescence (starting dilution 1:50, dilution range 1:50-1:500).

Molecular Weight of Rabies Virus: 190 kDa.

STORAGE

Store at 4° C, ****DO NOT FREEZE****. Stable for one year from the date of shipment. Non-hazardous. No MSDS required.

PROTOCOLS

See our web site at www.scbt.com for detailed protocols and support products.
