KIR2DS4 (5F2): sc-59279

The Power to Questio

BACKGROUND

NKAT (NK-associated transcripts) gene products, known as killer immuno-globulin-like receptors or KIRs, downregulate the cytotoxicity of NK cells upon recognition of specific class I major histocompatibility complex (MHC) molecules on target cells. This family of receptors is characterized by an extracellular region with two to three immunoglobulin-superfamily domains and a cytoplasmic domain with an antigen receptor activation motif (ARAM). KIRs and other inhibitory receptors also possess a common cytoplasmic sequence (I/VxYxxL/V) known as an ITIM (immunoreceptor tyrosine-based inhibitory motif). The human inhibitory human killer cell immunoglobulin-like receptor 2DS4 (KIR2DS4) is an activating KIR that recognizes the HLA-Cw4 protein and a non-class I MHC protein expressed on melanoma cell lines.

CHROMOSOMAL LOCATION

Genetic locus: KIR2DS4 (human) mapping to 19q13.42.

SOURCE

KIR2DS4 (5F2) is a mouse monoclonal antibody raised against recombinant KIR2DS4 of human origin.

PRODUCT

Each vial contains 100 μg lgG_{2b} in 1.0 ml of PBS with < 0.1% sodium azide and 0.1% gelatin.

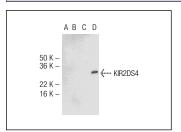

APPLICATIONS

KIR2DS4 (5F2) is recommended for detection of KIR2DS4 of human origin by Western Blotting (starting dilution 1:200, dilution range 1:100-1:1000) and immunoprecipitation [1-2 µg per 100-500 µg of total protein (1 ml of cell lysate)]; non cross-reactive with KIR2DL1, KIR2DL3 and KIR2DL4.

Suitable for use as control antibody for KIR2DS4 siRNA (h): sc-106923, KIR2DS4 shRNA Plasmid (h): sc-106923-SH and KIR2DS4 shRNA (h) Lentiviral Particles: sc-106923-V.

Molecular Weight of KIR2DS4: 33 kDa.

DATA

KIR2DS4 (5F2): sc-59279. Western blot analysis of recombinant human KIR2DL1 (**A**), KIR2DL3 (**B**), KIR2DL4 (**C**) and KIR2DS4 (**D**).

STORAGE

Store at 4° C, **DO NOT FREEZE**. Stable for one year from the date of shipment. Non-hazardous. No MSDS required.

RESEARCH USE

For research use only, not for use in diagnostic procedures.

PROTOCOLS
