

# p53 (2B2.68): sc-71817

## BACKGROUND

p53, a DNA-binding, oligomerization domain- and transcription activation domain-containing tumor suppressor that upregulates growth arrest and apoptosis-related genes in response to stress signals, thereby influencing programmed cell death, cell differentiation and cell cycle control mechanisms. p53 localizes to the nucleus, yet can be chaperoned to the cytoplasm by the negative regulator MDM2, an E3 ubiquitin ligase that is upregulated in the presence of active p53, where MDM2 polyubiquitinates p53 for proteasome targeting. p53 fluctuates between latent and active (DNA-binding) conformations, and is differentially activated through post-translational modifications including phosphorylation and acetylation. Mutations in the DNA-binding domain (DBD) of p53, amino acids 110-286, can compromise energetically favorable association with *cis* elements and are implicated in several human cancers.

## CHROMOSOMAL LOCATION

Genetic locus: TP53 (human) mapping to 17p13.1.

## SOURCE

p53 (2B2.68) is a mouse monoclonal antibody raised against amino acids 11-25 of p53 of human origin.

## PRODUCT

Each vial contains 200 µg IgG<sub>2a</sub> kappa light chain in 1.0 ml of PBS with < 0.1% sodium azide and 0.1% gelatin. Also available as TransCruz reagent for Gel Supershift and ChIP applications, sc-71817 X, 200 µg/0.1 ml.

p53 (2B2.68) is available conjugated to agarose (sc-71817 AC), 500 µg/0.25 ml agarose in 1 ml, for IP; to HRP (sc-71817 HRP), 200 µg/ml, for WB, IHC(P) and ELISA; and to either phycoerythrin (sc-71817 PE) or fluorescein (sc-71817 FITC), 200 µg/ml, for WB (RGB), IF, IHC(P) and FCM.

In addition, p53 (2B2.68) is available conjugated to TRITC (sc-71817 TRITC, 200 µg/ml), for IF, IHC(P) and FCM.

## APPLICATIONS

p53 (2B2.68) is recommended for detection of wild type and mutant p53 under denaturing and non-denaturing conditions of human origin by Western Blotting (starting dilution 1:200, dilution range 1:100-1:1000), immunoprecipitation [1-2 µg per 100-500 µg of total protein (1 ml of cell lysate)], immunofluorescence (starting dilution 1:50, dilution range 1:50-1:500), immunohistochemistry (including paraffin-embedded sections) (starting dilution 1:50, dilution range 1:50-1:500) and flow cytometry (1 µg per 1 x 10<sup>6</sup> cells).

Suitable for use as control antibody for p53 siRNA (h): sc-29435, p53 shRNA Plasmid (h): sc-29435-SH and p53 shRNA (h) Lentiviral Particles: sc-29435-V.

p53 (2B2.68) X TransCruz antibody is recommended for Gel Supershift and ChIP applications.

Molecular Weight of p53: 53 kDa.

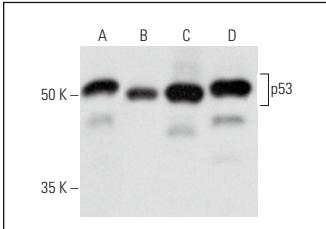

## RESEARCH USE

For research use only, not for use in diagnostic procedures.

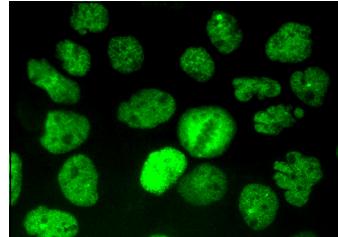

## STORAGE

Store at 4° C, \*\*DO NOT FREEZE\*\*. Stable for one year from the date of shipment. Non-hazardous. No MSDS required.

## DATA

p53 (2B2.68) HRP: sc-71817 HRP. Direct western blot analysis of p53 expression in A-431 (**A**), HCT-116 (**B**), MDA-MB-231 (**C**) and T-47D (**D**) whole cell lysates.

p53 (2B2.68): sc-71817. Immunofluorescence staining of formalin-fixed A-431 cells showing nuclear localization.
