PLC δ1 (C-20): sc-7521

SANTA CRUZ BIOTECHNOLOGY

The Power to Question

BACKGROUND

Phosphoinositide-specific phospholipase C (PLC) plays a crucial role in the initiation of receptor-mediated signal transduction through the generation of the two second messengers, inositol 1,4,5-triphosphate (IP3) and diacylglycerol (DAG) from phosphatidylinositol 4,5-bisphosphate. There are several mammalian PLC proteins, including PLC β1, PLC β2, PLC β3, PLC β4, PLCγ1, PLCγ2, PLC δ1, PLC δ3, PLC δ4 and PLCε. PLC δ1, a calcium signal amplifier, is activated by an atypical GTP-binding protein and functions as an effector for GTP-binding protein transglutaminase II-mediated oxytocin receptor and α1B-adrenoreceptor signaling. PLC δ1 is highly expressed in brain, heart, lung and testis and is abnormally accumulated in autopsied brains with Alzheimer's disease (AD), suggesting that it may play a role in the pathology of AD. Both PLC δ3 and PLC δ4 contain several functional domains through which they bind calcium as a cofactor and catalyze the creation of DAG and IP3, playing an essential role in signal transduction. PLC δ4 is highly expressed in skeletal muscle and kidney tissue, as well as in corneal epithelial cells, suggesting a role in the regulation of kidney and ocular function.

CHROMOSOMAL LOCATION

Genetic locus: PLCD1 (human) mapping to 3p21.3; Plcd1 (mouse) mapping to 9 F3.

SOURCE

PLC δ1 (C-20) is an affinity purified goat polyclonal antibody raised against a peptide mapping at the C-terminus of PLC δ1 of human origin.

PRODUCT

Each vial contains 200 µg IgG in 1.0 ml of PBS with < 0.1% sodium azide and 0.1% gelatin.

Blocking peptide available for competition studies, sc-7521 P, (100 µg peptide in 0.5 ml PBS containing < 0.1% sodium azide and 0.2% BSA).

STORAGE

Store at 4° C, **DO NOT FREEZE**. Stable for one year from the date of shipment. Non-hazardous. No MSDS required.

APPLICATIONS

PLC δ1 (C-20) is recommended for detection of PLC δ1 of mouse, rat and human origin by Western Blotting (starting dilution 1:200, dilution range 1:100-1:1000), immunoprecipitation [1-2 µg per 100-500 µg of total protein (1 ml of cell lysate)], immunofluorescence (starting dilution 1:50, dilution range 1:50-1:500) and solid phase ELISA (starting dilution 1:30, dilution range 1:30-1:3000).

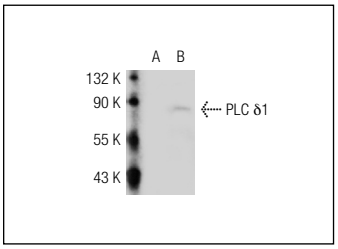
PLC δ1 (C-20) is also recommended for detection of PLC δ1 in additional species, including equine, canine, bovine and porcine.

Suitable for use as control antibody for PLC δ1 siRNA (h): sc-40841, PLC δ1 siRNA (m): sc-40842, PLC δ1 shRNA Plasmid (h): sc-40841-SH, PLC δ1 shRNA Plasmid (m): sc-40842-SH, PLC δ1 shRNA (h) Lentiviral Particles: sc-40841-V and PLC δ1 shRNA (m) Lentiviral Particles: sc-40842-V.

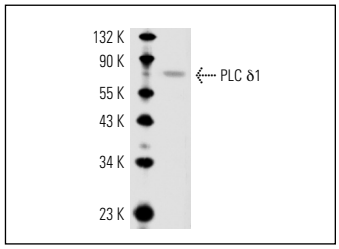
Molecular Weight of PLC δ1: 85 kDa.

Positive Controls: PLC δ1 (m): 293T Lysate: sc-122626, A-10 cell lysate: sc-3806 or mouse lung extract: sc-2390.

DATA



PLC δ1 (C-20): sc-7521. Western blot analysis of PLC δ1 expression in non-transfected: sc-117752 (**A**) and mouse PLC δ1 transfected: sc-122626 (**B**) 293T whole cell lysates.



PLC δ1 (C-20): sc-7521. Western blot analysis of PLC δ1 expression in mouse lung tissue extract.
