# SANTA CRUZ BIOTECHNOLOGY, INC.

# Retinal RX (N-20): sc-79029

#### BACKGROUND

The homeobox DNA-binding domain is a 60 amino acid motif that is conserved among many species and functions to bind DNA via a helix-turn-helix structure, thereby playing a role in transcriptional regulation and the control of gene expression. Retinal RX, also known as RAX (retina and anterior neural fold homeobox), MCOP3 or RX, is a 346 amino acid protein that localizes to the nucleus and contains one OAR domain and one homeobox DNA-binding domain. Expressed in developing eye tissue, as well as in adult retina tissue, Retinal RX plays a crucial role in eye formation, specifically by regulating the specification and proliferation of retinal cells. Defects in the gene encoding Retinal RX are the cause of microphthalmia isolated type 3 (MCOP3), a heterogeneous disorder that is characterized by opacities of the cornea and lens and scaring of the retina and choroid.

#### CHROMOSOMAL LOCATION

Genetic locus: RAX (human) mapping to 18q21.32; Rax (mouse) mapping to 18 E1.

#### SOURCE

Retinal RX (N-20) is an affinity purified rabbit polyclonal antibody raised against a peptide mapping at the N-terminus of Retinal RX of human origin.

# PRODUCT

Each vial contains 100  $\mu$ g lgG in 1.0 ml of PBS with < 0.1% sodium azide and 0.1% gelatin. Also available as TransCruz reagent for Gel Supershift and ChIP applications, sc-79029 X, 200  $\mu$ g/0.1 ml.

Blocking peptide available for competition studies, sc-79029 P, (100  $\mu$ g peptide in 0.5 ml PBS containing < 0.1% sodium azide and 0.2% BSA).

# STORAGE

Store at 4° C, \*\*D0 NOT FREEZE\*\*. Stable for one year from the date of shipment. Non-hazardous. No MSDS required.

# PROTOCOLS

See our web site at www.scbt.com or our catalog for detailed protocols and support products.

### APPLICATIONS

Retinal RX (N-20) is recommended for detection of Retinal RX of mouse, rat and human origin by Western Blotting (starting dilution 1:200, dilution range 1:100-1:1000), immunoprecipitation [1-2  $\mu$ g per 100-500  $\mu$ g of total protein (1 ml of cell lysate)], immunofluorescence (starting dilution 1:50, dilution range 1:50-1:500) and solid phase ELISA (starting dilution 1:30, dilution range 1:30-1:3000).

Retinal RX (N-20) is also recommended for detection of Retinal RX in additional species, including equine, canine and porcine.

Suitable for use as control antibody for Retinal RX siRNA (h): sc-76390, Retinal RX siRNA (m): sc-76391, Retinal RX shRNA Plasmid (h): sc-76390-SH, Retinal RX shRNA Plasmid (m): sc-76391-SH, Retinal RX shRNA (h) Lentiviral Particles: sc-76390-V and Retinal RX shRNA (m) Lentiviral Particles: sc-76391-V.

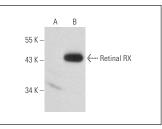

Retinal RX (N-20) X TransCruz antibody is recommended for Gel Supershift and ChIP applications.

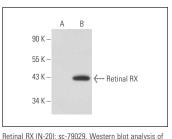

Molecular Weight (predicted) of Retinal RX: 37 kDa.

Molecular Weight (observed) of Retinal RX: 21-37 kDa.

Positive Controls: Y79 nuclear extract: sc-2126 or Retinal RX (m2): 293T Lysate: sc-123076.

#### DATA

Retinal RX (N-20): sc-79029. Western blot analysis of Retinal RX expression in non-transfected: sc-117752 (A) and mouse Retinal RX transfected: sc-123075 (B) 293T whole cell lysates.

 Retinal RX expression in non-transfected: sc-117752 (A) and mouse Retinal RX transfected: sc-123076 (B) 2931 whole cell lysates.

#### **RESEARCH USE**

For research use only, not for use in diagnostic procedures.

# MONOS Satisfation Guaranteed

Try Retinal RX (G-12): sc-271889 or Retinal RX (H-7): sc-376837, our highly recommended monoclonal alternatives to Retinal RX (N-20).
