The Power to Question

## BACKGROUND

TIAF-1 (TGF $\beta$ 1-induced antiapoptotic factor 1), also known as MY018A, MAJN or MYSPDZ, is a TGF $\beta$ 1-induced anti-apoptotic factor that localizes to the nucleus and functions to inhibit the cytotoxic effects of TNF $\alpha$ , TRADD and FADD. Two isoforms of mouse TIAF-1 exist and are designated MysPD2- $\alpha$  and MysPDZ- $\beta$ . MysPDZ- $\alpha$  consists of a KE-rich region, an N-terminal PDZ domain and a prevalent myosin homologous head region, while the MysPDZ- $\beta$  isoform lacks the KE-rich region and PDZ domain. MysPDZ- $\alpha$  is present in most tissues and is known to co-localize with the ER-Golgi complex and with membrane ruffles and filopodia. MysPDZ- $\beta$  is expressed specifically in hematopoietic tissues and cell lines and shows dispersed localization in the cytoplasm.
