

ABCC13 (I-18): sc-83183

BACKGROUND

The ATP-binding cassette (ABC) superfamily is comprised of transmembrane proteins involved in energy-dependent transport of a variety of substrates across membranes. ABCC13 is a 274 amino acid protein belonging to the MRP subfamily of the ABC transporter family. ABCC13 contains one ABC transmembrane type-1 domain, but does not contain Walker A, Walker B, and signature C motifs that are present in most ABC proteins, which indicates ABCC13 is not a functional transporter. ABCC13 has highest levels in colon and is present at lower levels in brain, liver, placenta, lung, ovary and pancreas. ABCC13 is expressed as five isoforms produced by alternative splicing.

APPLICATIONS

ABCC13 (I-18) is recommended for detection of ABCC13 of human origin by Western Blotting (starting dilution 1:200, dilution range 1:100-1:1000), immunoprecipitation [1-2 µg per 100-500 µg of total protein (1 ml of cell lysate)], immunofluorescence (starting dilution 1:50, dilution range 1:50-1:500) and solid phase ELISA (starting dilution 1:30, dilution range 1:30-1:3000); non cross-reactive with other ABC family members.

ABCC13 (I-18) is also recommended for detection of ABCC13 in additional species, including equine, canine and bovine.

Molecular Weight of ABCC13: 31 kDa.

Positive Controls: Hep G2 cell lysate: sc-2227, HEK293 whole cell lysate: sc-45136 or HeLa whole cell lysate: sc-2200.
