

# HNF-1 (H-205): sc-8986

## BACKGROUND

HNF-1 ( $\alpha$  and  $\beta$ ), HNF-3 ( $\alpha$ ,  $\beta$  and  $\gamma$ ), HNF-4 ( $\alpha$  and  $\gamma$ ) and HNF-6 compose, in part, a homeoprotein family designated the hepatocyte nuclear factor family. The various HNF-1 isoforms regulate transcription of genes in liver and in other tissues such as kidney, small intestine and thymus. HNF-3 $\alpha$ , HNF-3 $\beta$  and HNF-3 $\gamma$  regulate the transcription of numerous hepatocyte genes in adult liver. HNF-3 $\alpha$  and HNF-3 $\beta$  have also been shown to be involved in gastrulation events such as body axis formation. HNF-4 $\alpha$  and HNF-4 $\gamma$  have been shown to be important for early embryo development. HNF-4 $\alpha$  is expressed in liver, kidney, pancreas, small intestine, testis and colon; and HNF-4 $\gamma$  is expressed in each of these tissues except liver. HNF-6 has been shown to bind to the promoter of HNF-3 $\beta$ , which indicates a potential role of HNF-6 in gut endoderm epithelial cell differentiation. Evidence suggests that HNF-6 may also be a transcriptional activator for at least 22 other hepatocyte-enriched genes, including cytochrome P450 2C13 and  $\alpha$ -1 antitrypsin.

## CHROMOSOMAL LOCATION

Genetic locus: HNF1A (human) mapping to 12q24.31, HNF1B (human) mapping to 17q12; Hnf1a (mouse) mapping to 5 F, Hnf1b (mouse) mapping to 11 C.

## SOURCE

HNF-1 (H-205) is a rabbit polyclonal antibody raised against amino acids 80-284 of HNF-1 $\alpha$  of human origin.

## PRODUCT

Each vial contains 200  $\mu$ g IgG in 1.0 ml of PBS with < 0.1% sodium azide and 0.1% gelatin. Also available as TransCruz reagent for Gel Supershift and ChIP applications, sc-8986 X, 200  $\mu$ g/0.1 ml.

## APPLICATIONS

HNF-1 (H-205) is recommended for detection of HNF-1 $\alpha$  and HNF-1 $\beta$  of mouse, rat and human origin by Western Blotting (starting dilution 1:200, dilution range 1:100-1:1000), immunoprecipitation [1-2  $\mu$ g per 100-500  $\mu$ g of total protein (1 ml of cell lysate)], immunofluorescence (starting dilution 1:50, dilution range 1:50-1:500), immunohistochemistry (including paraffin-embedded sections) (starting dilution 1:50, dilution range 1:50-1:500) and solid phase ELISA (starting dilution 1:30, dilution range 1:30-1:3000).

HNF-1 (H-205) is also recommended for detection of HNF-1 $\alpha$  and HNF-1 $\beta$  in additional species, including canine, bovine, porcine and avian.

HNF-1 (H-205) X TransCruz antibody is recommended for Gel Supershift and ChIP applications.

Molecular Weight of HNF-1: 79 kDa.

Positive Controls: Hep G2 cell lysate: sc-2227.

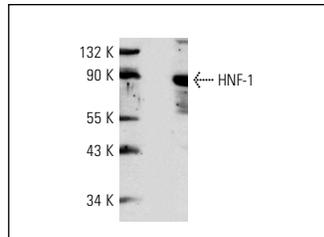

## STORAGE

Store at 4° C, \*\*DO NOT FREEZE\*\*. Stable for one year from the date of shipment. Non-hazardous. No MSDS required.

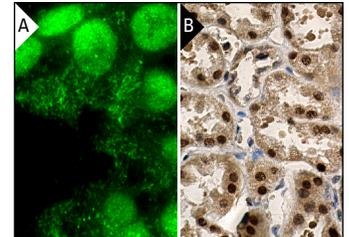

## RESEARCH USE

For research use only, not for use in diagnostic procedures.

## DATA

HNF-1 (H-205): sc-8986. Western blot analysis of HNF1 expression in Hep G2 whole cell lysate.

HNF-1 (H-205): sc-8986. Immunofluorescence staining of formalin-fixed Hep G2 cells showing nuclear localization (A). Immunoperoxidase staining of formalin fixed, paraffin-embedded human kidney tissue showing nuclear staining of cells in tubules (B).
