# SANTA CRUZ BIOTECHNOLOGY, INC.

# Rotavirus capsid (2B4): sc-101363

## BACKGROUND

Rotaviruses, a genus of the family Reoviridae, are double-stranded RNA viruses that are one of the leading causes of gastroenteritis in infants and young children. The virus exists as seven species, designated Rotavirus A, B, C, D, E, F and G, with Rotavirus A being the most common cause of infection. Rotavirus is transmitted via the fecal-oral route and, once in the body, infects cells of the small intestine, producing an enterotoxin that alters the permeability of the cell wall, causing severe diarrhea and dehydration. The entry of Rotavirus into cells occurs by either direct penetration of the cell membrane or endocytosis followed by membrane vesicle solubilization, both of which are facilitated by the Rotavirus capsid. The Rotavirus capsid is composed of three concentric protein layers, the outer two of which are called VP4 and VP7 and are sacrificed in a calcium-dependent manner during viral entry into the cell.

## SOURCE

Rotavirus capsid (2B4) is a mouse monoclonal antibody raised against recombinant Rotavirus capsid.

## PRODUCT

Each vial contains 50  $\mu$ g lgG<sub>2b</sub> kappa light chain in 0.5 ml of PBS with < 0.1% sodium azide and 0.1% gelatin.

## **RESEARCH USE**

For research use only, not for use in diagnostic procedures.

### **APPLICATIONS**

Rotavirus capsid (2B4) is recommended for detection of inner capsid protein VP6 of Rotavirus origin by Western Blotting (starting dilution to be determined by researcher, dilution range 1:100-1:5000), immunofluorescence (starting dilution to be determined by researcher, dilution range 1:50-1:2500), immunohistochemistry (including paraffin-embedded sections) (starting dilution to be determined by researcher, dilution range 1:50-1:2500) and solid phase ELISA (starting dilution to be determined by researcher, dilution range 1:100-1:5000).

### **RECOMMENDED SUPPORT REAGENTS**

To ensure optimal results, the following support reagents are recommended: 1) Western Blotting: use m-IgG K BP-HRP: sc-516102 or m-IgG K BP-HRP (Cruz Marker): sc-516102-CM (dilution range: 1:1000-1:10000), Cruz Marker™ Molecular Weight Standards: sc-2035, UltraCruz® Blocking Reagent: sc-516214 and Western Blotting Luminol Reagent: sc-2048. 2) Immunofluorescence: use m-lqGk BP-FITC: sc-516140 or m-lqGk BP-PE: sc-516141 (dilution range: 1:50-1:200) with UltraCruz® Mounting Medium: sc-24941 or UltraCruz® Hard-set Mounting Medium: sc-359850. 3) Immunohistochemistry: use m-IgG K BP-HRP: sc-516102 with DAB, 50X: sc-24982 and Immunohistomount: sc-45086, or Organo/Limonene Mount: sc-45087.
