Ankyrin G (463): sc-12719

BACKGROUND

Members of the Ankyrin family of proteins mediate the attachment of integral membrane proteins to the cytoskeleton. ANK1, ANK2 and ANK3 genes encode for the proteins in this family. Ankyrin-1 (also designated Ankyrin R), Ankyrin B and Ankyrin G, respectively. The proteins are structured similarly, each composed of an N-terminal domain with multiple ankyrin repeats, a highly conserved central spectrin binding domain and C-terminal regulatory domains which are susceptible to the most variance. Both Ankyrin B and Ankyrin G are essential for normal neuronal functions. Ankyrin G was originally identified localized to the nodes of Ranvier and axon initial segments where it was found to mediate normal neuronal sodium channel function. Ankyrin G, named for its giant size and general expression, exhibits tissue-specific alternative mRNA processing. The two largest protein isoforms are expressed only in nervous tissue, with additional smaller isoforms found in an array of other tissues including lung, kidney, spleen, liver and heart.

REFERENCES

CHROMOSOMAL LOCATION

Genetic locus: ANK3 (human) mapping to 10q21.2; Ank3 (mouse) mapping to 10 B5.3.

SOURCE

Ankyrin G (463) is a mouse monoclonal antibody raised against a synthetic peptide derived from the spectrin-binding domain of Ankyrin G human origin.

PRODUCT

Each vial contains 200 µg IgG, kappa light chain in 1.0 ml of PBS with <0.1% sodium azide and 0.1% gelatin.

Ankyrin G (463) is available conjugated to agarose (sc-12719 AC), 500 µg/0.25 ml agarose in 1 ml, for IP; to HRP (sc-12719 HRP), 200 µg/ml, for WB, IHC(PE) and ELISA; to either phycoerythrin (sc-12719 PE), fluorescein (sc-12719 FITC), Alexa Fluor® 488 (sc-12719 AF488), Alexa Fluor® 546 (sc-12719 AF546), Alexa Fluor® 594 (sc-12719 AF594) or Alexa Fluor® 647 (sc-12719 AF647), 200 µg/ml, for WB (RGB), IF, IHC(PE) and FCM; and to either Alexa Fluor® 680 (sc-12719 AF680) or Alexa Fluor® 790 (sc-12719 AF790), 200 µg/ml, for Near-Infrared (NIR) WB, IF and FCM. Alexa Fluor® is a trademark of Molecular Probes, Inc., Oregon, USA.

APPLICATIONS

Ankyrin G (463) is recommended for detection of Ankyrin G of mouse, rat and human origin by Western Blotting (starting dilution 1:200, dilution range 1:100-1:1000), immunoprecipitation (1-2 µg per 100-500 µg of total protein (1 ml of cell lysate)), immunofluorescence (starting dilution 1:50, dilution range 1:50-1:500) and immunohistochemistry (including paraffin-embedded sections) (starting dilution 1:50, dilution range 1:50-1:500).

Ankyrin G (463) is also recommended for detection of Ankyrin G in additional species, including canine.

Molecular Weight of Ankyrin G brain-specific isoforms: 480/270 kDa.

Molecular Weight of other Ankyrin G isoforms: 50-190 kDa.

Positive Controls: SK-N-MC cell lysate: sc-2237, SK-N-SH cell lysate: sc-2410 or IMR-32 cell lysate: sc-2409.
