BACKGROUND

The peroxiredoxin (PRX) family comprises six antioxidant proteins, PRX I, II, III, IV, V and VI, which protect cells from reactive oxygen species (ROS) by preventing the metal-catalyzed oxidation of enzymes. The PRX proteins primarily utilize thioredoxin as the electron donor for antioxidation, although they are fairly promiscuous with regard to the hydroperoxide substrate. In addition to protection from ROS, peroxiredoxins are also involved in cell proliferation, differentiation and gene expression. PRX I, II, IV and VI show diffuse cytoplasmic localization, while PRX III and V exhibit distinct mitochondrial localization. The human PRX I gene encodes a protein that is expressed in several tissues, including liver, kidney, testis, lung and nervous system. PRX II is expressed in testis, while PRX III shows expression in lung. PRX I, II and III are overexpressed in breast cancer and may be involved in its development or progression. Upregulated protein levels of PRX I and II in breast cancer may be involved in its development or progression.

CHROMOSOMAL LOCATION

Genetic locus: PRDX3 (human) mapping to 10q26.11; Prdx3 (mouse) mapping to 19 D3.

SOURCE

PRX III (1) is a mouse monoclonal antibody raised against recombinant PRX III of human origin.

PRODUCT

Each vial contains 200 µg IgG\textsubscript{1} kappa light chain in 1.0 ml of PBS with < 0.1% sodium azide and 0.1% gelatin.

PRX III (1) is available conjugated to agarose (sc-130336 AC), 500 µg/0.25 ml agarose in 1 ml, for IP; to HRP (sc-130336 HRP), 200 µg/ml, for WB, HICP and ELISA; to either phycoerythrin (sc-130336 PE), fluorescein (sc-130336 FITC), Alexa Fluor\textsuperscript{®} 488 (sc-130336 AF488), Alexa Fluor\textsuperscript{®} 546 (sc-130336 AF546), Alexa Fluor\textsuperscript{®} 594 (sc-130336 AF594) or Alexa Fluor\textsuperscript{®} 647 (sc-130336 AF647), 200 µg/ml, for WB (RGB), IF, IHC(P) and FC; and to either Alexa Fluor\textsuperscript{®} 680 (sc-130336 AF680) or Alexa Fluor\textsuperscript{®} 790 (sc-130336 AF790), 200 µg/ml, for Near-Infrared (NIR) WB, IF and FC.

ALEXA FLUOR\textsuperscript{®} is a trademark of Molecular Probes, Inc., Oregon, USA

APPLICATIONS

PRX III (1) is recommended for detection of PRX III of mouse, rat and human origin by Western Blotting (starting dilution 1:200, dilution range 1:100-1:1000) and solid phase ELISA (starting dilution 1:30, dilution range 1:30-1:3000).

Molecular Weight of PRX III: 26 kDa.

Positive Controls: HeLa whole cell lysate: sc-2200, MCF7 whole cell lysate: sc-2206 or A-431 whole cell lysate: sc-2201.

RECOMMENDED SUPPORT REAGENTS

To ensure optimal results, the following support reagents are recommended:

1) Western Blotting: use m-IgG\textsubscript{k} BP-HRP: sc-516102 or m-IgG\textsubscript{k} BP-HRP (Cruz Marker): sc-516102-CM (dilution range: 1:1000-1:10000), Cruz Marker\textsuperscript{TM} Molecular Weight Standards: sc-2035, UltraCruz\textsuperscript{®} Blocking Reagent: sc-516214 and Western Blotting Luminol Reagent: sc-2048.
