Cdk9 (D-7): sc-13130

BACKGROUND

Cdk9 Antibody (D-7) is a high quality monoclonal Cdk9 antibody (also designated Cyclin-dependent kinase 9 antibody, Serine/threonine-protein kinase PITALRE antibody or CDC2L4 antibody) suitable for the detection of the Cdk9 protein of mouse, rat and human origin. Cdk9 Antibody (D-7) is available as both the non-conjugated anti-Cdk9 antibody form, as well as multiple conjugated forms of anti-Cdk9 antibody, including agarose, HRP, PE, FITC and multiple Alexa Fluor® conjugates. A family of proteins designated cyclin dependent kinases (Cdks) are critical regulators of cell cycle progression. Cdk family members, including Cdc2 p34, Cdk1-9, PISSLRE, KKIALRE, PITSLRE and PCTAIRE 1-3 are constitutively expressed throughout the cell cycle. Cdc2 p34 activity peaks during mitosis and Cdk2 activity rises in late G1, or early S phase. Cdk4 and Cdk6 are critically involved in early S phase. Cdk4 and Cdk6 are critically involved in cell cycle progression. The functions of Cdk3, Cdk5b, PISSLRE, P-TEFb, is thought to be the nuclear export factor (mRNA export factor 2), which is involved in the regulation of gene expression.

CHROMOSOMAL LOCATION
