Legumain, also known as LGMN, AEP (asparaginyl endopeptidase) or PRSC1, is a 433 amino acid protein that localizes to the lysosome and belongs to the peptidase C13 family. Expressed ubiquitously with particularly high expression in placenta, heart and kidney, Legumain functions as a cysteine protease that specifically catalyzes the hydrolysis of asparaginyl and aspartyl bonds. Additionally, Legumain is thought to be involved in the processing of bacterial proteins for MHC class II antigen presentation in the lysosomal/endosomal system. Legumain exists as both a precursor and a fully mature, active enzyme that is produced in dendritic cells. Overexpression of Legumain may be associated with the formation of solid tumors, suggesting a role for Legumain in carcinogenesis. Multiple isoforms of Legumain exist due to alternative splicing events.

Genetic locus: LGMN (human) mapping to 14q32.12; Lgmn (mouse) mapping to 12 E.

Each vial contains 200 µg IgG, kappa light chain in 1.0 ml of PBS with < 0.1% sodium azide and 0.1% gelatin.

Legumain (B-8) is available conjugated to agarose (sc-133234 AC), 500 µg/0.25 ml agarose in 1 ml, for IP; to HRP (sc-133234 HRP), 200 µg/ml, for WB, IHC® and ELISA; to either phycoerythrin (sc-133234 PE), fluorescein (sc-133234 FITC), Alexa Fluor® 488 (sc-133234 AF488), Alexa Fluor® 546 (sc-133234 AF546), Alexa Fluor® 594 (sc-133234 AF594) or Alexa Fluor® 647 (sc-133234 AF647), 200 µg/ml, for WB (RGB), IF, IHC® and FCM; and to either Alexa Fluor® 680 (sc-133234 AF680) or Alexa Fluor® 790 (sc-133234 AF790), 200 µg/ml, for Near-Infrared (NIR) WB, IF and FCM.

Legumain (B-8) is a mouse monoclonal antibody raised against amino acids 21-320 mapping near the N-terminus of Legumain of human origin.

Legumain (B-8): sc-133234
