

RTTEL1 siRNA (m): sc-153164

BACKGROUND

RTTEL1 (regulator of telomere elongation helicase 1), also known as C20orf41, KIAA1088 or NHL, is a 1,400 amino acid nuclear protein that contains one helicase ATP-binding domain and belongs to the helicase family of DNA-binding proteins. In mice, RTTEL1 is required for telomere elongation and is an important regulator of chromosome stability. Human RTTEL1 is highly expressed in kidney and intestine and, existing as a functional ortholog of its mouse counterpart, is thought to act as an ATP-dependent helicase that may regulate chromosome function and genomic stability. The gene encoding RTTEL1 maps to a gene-rich cluster on chromosome 20 that is thought to house a number of tumor-related genes, suggesting that RTTEL1 may play a role in tumorigenesis. Multiple isoforms of RTTEL1 exist due to alternative splicing events.

CHROMOSOMAL LOCATION

Genetic locus: Rtel1 (mouse) mapping to 2 H4.

RESEARCH USE

For research use only, not for use in diagnostic procedures.

PROTOCOLS

See our web site at www.scbt.com for detailed protocols and support products.

PRODUCT

RTTEL1 siRNA (m) is a pool of 3 target-specific 19-25 nt siRNAs designed to knock down gene expression. Each vial contains 3.3 nmol of lyophilized siRNA, sufficient for a 10 μ M solution once resuspended using protocol below. Suitable for 50-100 transfections. Also see RTTEL1 shRNA Plasmid (m): sc-153164-SH and RTTEL1 shRNA (m) Lentiviral Particles: sc-153164-V as alternate gene silencing products.

For independent verification of RTTEL1 (m) gene silencing results, we also provide the individual siRNA duplex components. Each is available as 3.3 nmol of lyophilized siRNA. These include: sc-153164A, sc-153164B and sc-153164C.

STORAGE AND RESUSPENSION

Store lyophilized siRNA duplex at -20° C with desiccant. Stable for at least one year from the date of shipment. Once resuspended, store at -20° C, avoid contact with RNAses and repeated freeze thaw cycles.

Resuspend lyophilized siRNA duplex in 330 μ l of the RNase-free water provided. Resuspension of the siRNA duplex in 330 μ l of RNase-free water makes a 10 μ M solution in a 10 μ M Tris-HCL, pH 8.0, 20 mM NaCl, 1 mM EDTA buffered solution.

APPLICATIONS

RTTEL1 siRNA (m) is recommended for the inhibition of RTTEL1 expression in mouse cells.

SUPPORT REAGENTS

For optimal siRNA transfection efficiency, Santa Cruz Biotechnology's siRNA Transfection Reagent: sc-29528 (0.3 ml), siRNA Transfection Medium: sc-36868 (20 ml) and siRNA Dilution Buffer: sc-29527 (1.5 ml) are recommended. Control siRNAs or Fluorescein Conjugated Control siRNAs are available as 10 μ M in 66 μ l. Each contain a scrambled sequence that will not lead to the specific degradation of any known cellular mRNA. Fluorescein Conjugated Control siRNAs include: sc-36869, sc-44239, sc-44240 and sc-44241. Control siRNAs include: sc-37007, sc-44230, sc-44231, sc-44232, sc-44233, sc-44234, sc-44235, sc-44236, sc-44237 and sc-44238.

RT-PCR REAGENTS

Semi-quantitative RT-PCR may be performed to monitor RTTEL1 gene expression knockdown using RT-PCR Primer: RTTEL1 (m)-PR: sc-153164-PR (20 μ l). Annealing temperature for the primers should be 55-60° C and the extension temperature should be 68-72° C.
