BACKGROUND

Tubulin is a major cytoskeleton component that has five distinct forms, designated α, β, γ, δ and ε tubulin. α and β tubulins form heterodimers which multimerize to form a microtubule filament. There are five β Tubulin isomers (β1, β2, β3, β4A and β4B) that are expressed in mammalian tissues. β1 and β4 are present throughout the cytosol, β2 is present in the nuclei and nucleoplasm, and β3 is a neuron-specific cytoskeletal protein. γ Tubulin forms the gammasome, which is required for nucleating microtubule filaments at the centrosome. Both δ Tubulin and ε Tubulin are associated with the centrosome. δ Tubulin is a homolog of the Chlamydomonas δ Tubulin Uni3 and is found in association with the centrioles, whereas ε Tubulin localizes to the pericentriolar material. ε Tubulin exhibits a cell cycle-specific pattern of localization; first associating with only the older of the centrosomes in a newly duplicated pair, and later associating with both centrosomes.

CHROMOSOMAL LOCATION

Genetic locus: TUBG1/TUBG2 (human) mapping to 17q21.2; TUBG1/TUBG2 (mouse) mapping to 11 D.

SOURCE

γ Tubulin (C-11) is a mouse monoclonal antibody raised against amino acids 269-451 of γ Tubulin of human origin.

PRODUCT

Each vial contains 200 µg IgG2a κappa light chain in 1.0 ml of PBS with < 0.1% sodium azide and 0.1% gelatin.

γ Tubulin (C-11) is available conjugated to agarose (sc-17787 AC), 500 µg/0.25 ml agarose in 1 ml, for IP; to HRP (sc-17787 HRP), 200 µg/ml, for WB, IHC(P) and ELISA; and to either phycoerythrin (sc-17787 PE), fluorescein (sc-17787 FITC), Alexa Fluor® 488 (sc-17787 AF488) or Alexa Fluor® 647 (sc-17787 AF647), 200 µg/ml, for IF, IHC(P) and FCM.

Alexa Fluor® is a trademark of Molecular Probes, Inc., Oregon, USA.

APPLICATIONS

γ Tubulin (C-11) is recommended for detection of γ Tubulin of mouse, rat and human origin by Western Blotting (starting dilution 1:200, dilution range 1:200-12,000), immunoprecipitation [1-2 µg per 100-500 µg of total protein (1 ml of cell lysate)], immunofluorescence (starting dilution 1:50, dilution range 1:50-1:500), immunohistochemistry (including paraffin-embedded sections) (starting dilution 1:50, dilution range 1:50-1:500) and solid phase ELISA (starting dilution 1:30, dilution range 1:30-1:3000).

Suitable for use as control antibody for γ Tubulin siRNA (h): sc-29322, γ Tubulin siRNA (m): sc-29323, γ Tubulin shRNA Plasmid (h): sc-29322-SH, γ Tubulin shRNA Plasmid (m): sc-29323-SH, γ Tubulin shRNA (h) Lentiviral Particles: sc-29322-V and γ Tubulin shRNA (m) Lentiviral Particles: sc-29323-V.

Molecular Weight of γ Tubulin: 50 kDa.

Positive Controls: A-431 whole cell lysate: sc-2201, K-562 whole cell lysate: sc-2203 or KNRK whole cell lysate: sc-2214.

STORAGE

Store at 4°C. **DO NOT FREEZE**. Stable for one year from the date of shipment. Non-hazardous. No MSDS required.

DATA

γ Tubulin (C-11) HRP: sc-17787 HRP. Direct western blot analysis of γ Tubulin expression in A-431 (A), K-562 (B), NIH/3T3 (C), KNRK (D) and HeLa (E) whole cell lysates.
