ICAM-1 (LB-2): sc-18908

BACKGROUND
Cell adhesion molecules (CAMs) are a family of closely related cell surface glycoproteins involved in cell-cell interactions during growth and are thought to play important, yet separate, roles in embryogenesis and development. The intracellular adhesion molecule-1 (ICAM-1), also referred to as CD54, is an integral membrane protein of the immunoglobulin superfamily and recognizes the β2α1 and β2αM Integrins. ICAM-2 functions as a ligand for lymphocyte function-associated antigen-1 (LFA-1) and is involved in leukocyte adhesion. ICAM-3 is highly expressed on the surface of human eosinophils and, when bound to ligand, may inhibit eosinophil inflammatory responses and survival. ICAM-4, also known as LW glycoprotein, interacts with Integrins αLβ2, αMβ2, α4β1, the αv family and αMβ3, and selective binding to different integrins may be relevant to the pathology in a number of red blood cell associated diseases. Lastly, ICAM-5, expressed on telencephalic neurons, binds CD11a/CD18 and thus may act as an adhesion molecule for leukocyte binding in the central nervous system.

CHROMOSOMAL LOCATION
Genetic locus: ICAM1 (human) mapping to 19p13.2.

SOURCE
ICAM-1 (LB-2) is a mouse monoclonal antibody raised against intracellular epitope of ICAM-1 of human origin.

PRODUCT
Each vial contains 200 µg IgG2b, kappa light chain in 1.0 ml of PBS with < 0.1% sodium azide and 0.1% gelatin. Also available azide-free for functional studies, sc-18908 L, 200 µg/0.1 ml.
ICAM-1 (LB-2) is available conjugated to either phycoerythrin (sc-18908 PE) or fluorescein (sc-18908 FITC), 200 µg/ml, for WB (RGB), IF, IHC(P) and FCM.

APPLICATIONS
ICAM-1 (LB-2) is recommended for detection of ICAM-1 of human origin by Western Blotting (starting dilution 1:200, dilution range 1:100-1:1000), immunoprecipitation (1-2 µg per 100-500 µg of total protein (1 ml of cell lysate)), immunofluorescence (starting dilution 1:50, dilution range 1:50-1:500) and flow cytometry (1 µg per 1 x 10^6 cells).
Suitable for use as control antibody for ICAM-1 siRNA (h): sc-29354, ICAM-1 shRNA Plasmid (h): sc-29354-SH and ICAM-1 shRNA (h) Lentiviral Particles: sc-29354-V.
Molecular Weight of ICAM-1: 85-110 kDa.
Positive Controls: HeLa whole cell lysate: sc-2200, TF-1 cell lysate: sc-2412 or U-937 cell lysate: sc-2239.

STORAGE
Store at 4° C, **DO NOT FREEZE**. Stable for one year from the date of shipment. Non-hazardous. No MSDS required.

RESEARCH USE
For research use only, not for use in diagnostic procedures.

DATA
ICAM-1 (LB-2): sc-18908. Western blot analysis of ICAM-1 expression in TF-1 whole cell lysate.
ICAM-1 (LB-2): sc-18908. Immunofluorescence staining of methanol-fixed HeLa cells showing membrane staining.
