β-dystroglycan (7D11): sc-33701

BACKGROUND

Dystroglycan (DG) is a cell surface receptor for several extracellular matrix molecules including laminins, Agrin and Perlecan. Dystroglycan function is required for the formation of basement membranes in early development and the organization of laminin on the cell surface. α-dystroglycan is a membrane-associated, extracellular glycoprotein that is anchored to the cell-membrane by binding to the transmembrane glycoprotein β-dystroglycan to form an αβ-dystroglycan-complex. Additionally, dystroglycan is part of a multimolecular complex, where it associates with dystrophin, at the sarcolemma, to form the dystrophin-associated protein complex or with utrophin, at the neuromuscular junction, to form the utrophin-associated protein complex. Dystroglycan is also thought to participate in the clustering of nicotinic acetylcholine receptors at the neuromuscular junction.

CHROMOSOMAL LOCATION

Genetic locus: DAG1 (human) mapping to 3p21.31; Dag1 (mouse) mapping to 9 F2.

SOURCE

β-dystroglycan (7D11) is a mouse monoclonal antibody raised against the C-terminus of β-dystroglycan of human origin.

PRODUCT

Each vial contains 200 μg IgG1, kappa light chain in 1.0 ml of PBS with < 0.1% sodium azide and 0.1% gelatin.

β-dystroglycan (7D11) is available conjugated to agarose (sc-33701 AC), 500 μg/0.25 ml agarose in 1 ml, for IP; to HRP (sc-33701 HRP), 200 μg/ml, for WB, HRP and ELISA; to either phycoerythrin (sc-33701 PE), fluorescein (sc-33701 FITC), Alexa Fluor® 488 (sc-33701 AF488), Alexa Fluor® 546 (sc-33701 AF546), Alexa Fluor® 594 (sc-33701 AF594) or Alexa Fluor® 647 (sc-33701 AF647), 200 μg/ml, for WB (RGB), IF, IHC(PO) and FCM; and to either Alexa Fluor® 680 (sc-33701 AF680) or Alexa Fluor® 790 (sc-33701 AF790), 200 μg/ml, for Near-Infrared (NIR) WB, IF and FCM.

APPLICATIONS

β-dystroglycan (7D11) is recommended for detection of β-dystroglycan of mouse, rat and human origin by Western Blotting (starting dilution 1:200, dilution range 1:100-1:1000), immunoprecipitation [1-2 μg per 100-500 μg of total protein (1 ml of cell lysate)], immunofluorescence (starting dilution 1:50, dilution range 1:50-1:500) and immunohistochemistry (including paraffin-embedded sections) (starting dilution 1:50, dilution range 1:50-1:500).

Suitable for use as control antibody for αβ-dystroglycan siRNA (h): sc-43488, αβ-dystroglycan siRNA (m): sc-43488, αβ-dystroglycan shRNA Plasmid (h): sc-43488-SH, αβ-dystroglycan shRNA Plasmid (m): sc-43489-SH, αβ-dystroglycan shRNA (h) Lentiviral Particles: sc-43488-V and αβ-dystroglycan shRNA (m) Lentiviral Particles: sc-43489-V.

Molecular Weight of β-dystroglycan precursor: 97 kDa.

Molecular Weight of mature β-dystroglycan: 43 kDa.

Positive Controls: MCF7 whole cell lysate: sc-2206, L6 whole cell lysate: sc-364196 or C6 whole cell lysate: sc-364373.

STORAGE

Store at 4° C, **DO NOT FREEZE**. Stable for one year from the date of shipment. Non-hazardous. No MSDS required.

DATA

β-dystroglycan (7D11) Alexa Fluor® 488: sc-33701 AF488. Direct fluorescent western blot analysis of β-dystroglycan expression in C6 (A) and L6 (B) whole cell lysates. Blocked with UltraCruz® Blocking Reagent: sc-516214. Cruz Marker™ Molecular Weight Standards detected with Cruz Marker™ MW Tag Alexa Fluor® 647: sc-516791.
