VEGF-C (E-6): sc-374628

**BACKGROUND**

The onset of angiogenesis is believed to be an early event in tumorigenesis and may facilitate tumor progression and metastasis. Several growth factors with angiogenic activity have been described. These include fibroblast growth factor (FGF), platelet derived growth factor (PDGF) and vascular endothelial growth factor (VEGF). VEGF is a dimeric glycoprotein with structural homology to PDGF. Several variants of VEGF have been described that arise by alternative mRNA splicing. It has been speculated that VEGF may function as a tumor angiogenesis factor in vivo. Two additional proteins, designated VEGF-B and VEGF-C, share a significant degree of homology with VEGF. VEGF-B is abundantly expressed in heart and skeletal muscle and is frequently coexpressed with VEGF. VEGF-C binds to and specifically activates Flt-4 and Flk-1. The genes that encode VEGF-B and VEGF-C have been localized to chromosomes 11q13.1 and 4q34.3, respectively.

**REFERENCES**

**CHROMOSOMAL LOCATION**

Genetic locus: VEGFC (human) mapping to 4q34.3; Vegfc (mouse) mapping to 4q34.3, respectively.

**SOURCE**

VEGF-C (E-6) is a mouse monoclonal antibody specific for an epitope mapping between amino acids 103-137 near the N-terminus of VEGF-C of human origin.

**PRODUCT**

Each vial contains 200 µg IgG₂κ kappa light chain in 1.0 ml of PBS with < 0.1% sodium azide and 0.1% gelatin.

VEGF-C (E-6) is available conjugated to agarose (sc-374628 AC), 500 µg/0.25 ml agarose in 1 ml, for WB; HICPI and ELISA; to either phycoerythrin (sc-374628 PE), fluorescence (sc-374628 FITC), Alexa Fluor® 488 (sc-374628 AF488), Alexa Fluor® 546 (sc-374628 AF546), Alexa Fluor® 594 (sc-374628 AF594) or Alexa Fluor® 647 (sc-374628 AF647), 200 µg/ml, for WB (RGB), IF, HICPI and FCM; and to either Alexa Fluor® 680 (sc-374628 AF680) or Alexa Fluor® 790 (sc-374628 AF790), 200 µg/ml, for Near-Infrared (NIR) WB, IF and FCM.

Blocking peptide available for competition studies, sc-374628 P, (100 µg peptide in 0.5 ml PBS containing < 0.1% sodium azide and 0.2% stabilizer protein).

Alexa Fluor® is a trademark of Molecular Probes, Inc., Oregon, USA

**STORAGE**

Store at 4°C, **DO NOT FREEZE**. Stable for one year from the date of shipment. Non-hazardous. No MSDS required.

**APPLICATIONS**

VEGF-C (E-6) is recommended for detection of precursor and mature VEGF-C of mouse, rat and human origin by Western Blotting (starting dilution 1:100, dilution range 1:100-1:1000), immunoprecipitation [1-2 µg per 100-500 µg of total protein (1 ml of cell lysate)], immunofluorescence (starting dilution 1:50, dilution range 1:50-1:500), immunohistochemistry (including paraffin-embedded sections) (starting dilution 1:50, dilution range 1:50-1:500) and solid phase ELISA (starting dilution 1:30, dilution range 1:30-1:3000).

Suitable for use as control antibody for VEGF-C siRNA (h): sc-39842, VEGF-C siRNA (m): sc-39843, VEGF-C shRNA Plasmid (h): sc-39842-SH, VEGF-C shRNA Plasmid (m): sc-39843-SH, VEGF-C shRNA (h) Lentiviral Particles: sc-39842-V and VEGF-C shRNA (m) Lentiviral Particles: sc-39843-V.

Molecular Weight of VEGF-C: 40/80 kDa.

Positive Controls: SK-N-MC cell lysate: sc-2237, MH-S whole cell lysate: sc-36478S or MCF7 whole cell lysate: sc-2206.
