BACKGROUND

Werner’s syndrome (WS), also called adult progeria, is an inherited, autosomal recessive disorder that is most common in families from regions of Japan where consanguineous marriages occur frequently. WS is characterized by premature aging and the early onset of age-related diseases and commonly results in cancer. The gene responsible for Werner’s syndrome, WRN, has been mapped to the short arm of chromosome 8p12, and the subsequent cloning of the gene has revealed a predicted protein of 1,432 amino acids in length, that bears significant sequence homology with DNA helicases. Four mutations in WRN have been identified in patients afflicted with WS. Two of the mutations involve mRNA splice-junctions. Of these two mutations, one was found in 60% of the individuals examined. This mutation is predicted to cause a frameshift which results in a truncated WRN protein.

CHROMOSOMAL LOCATION

Genetic locus: WRN (human) mapping to 8p12.

SOURCE

WRN (D-6) is a mouse monoclonal antibody raised against amino acids 1133-1432 of WRN of human origin.

PRODUCT

Each vial contains 200 µg IgG\textsubscript{k} kappa light chain in 1.0 ml of PBS with < 0.1% sodium azide and 0.1% gelatin.

WRN (D-6) is available conjugated to agarose (sc-376182 AC), 500 µg/0.25 ml agarose in 1 ml, for IP; to HRP (sc-376182 HRP), 200 µg/ml, for WB, IHC(P) and ELISA; to either phycoerythrin (sc-376182 PE), fluorescein (sc-376182 FITC), Alexa Fluor® 488 (sc-376182 AF488), Alexa Fluor® 546 (sc-376182 AF546), Alexa Fluor® 594 (sc-376182 AF594) or Alexa Fluor® 647 (sc-376182 AF647), 200 µg/ml, for WB (RGB), IF, IHC(P) and FCM; and to either Alexa Fluor® 680 (sc-376182 AF680) or Alexa Fluor® 790 (sc-376182 AF790), 200 µg/ml, for Near-Infrared (NIR) WB, IF and FCM.

Alexa Fluor® is a trademark of Molecular Probes, Inc., Oregon, USA

APPLICATIONS

WRN (D-6) is recommended for detection of WRN of human origin by Western Blotting (starting dilution 1:100, dilution range 1:100-1:1000), immunoprecipitation [1-2 µg per 100-500 µg of total protein (1 ml of cell lysate)], immunofluorescence (starting dilution 1:50, dilution range 1:500-1:5000) and solid phase ELISA (starting dilution 1:30, dilution range 1:30-1:3000).

Suitable for use as control antibody for WRN siRNA (h): sc-36843, WRN shRNA Plasmid (h): sc-36843-SH and WRN shRNA (h) Lentiviral Particles: sc-36843-V.

Molecular Weight of WRN: 170 kDa.

Positive Controls: NAMALWA cell lysate: sc-2234, K-562 nuclear extract: sc-2130 or A-431 whole cell lysate: sc-2201.

RECOMMENDED SUPPORT REAGENTS

To ensure optimal results, the following support reagents are recommended:

1) Western Blotting: use m-IgG\textsubscript{k} BP-HRP: sc-516102 or m-IgG\textsubscript{k} BP-HRP (Cruz Marker): sc-516102-CM (dilution range: 1:1000-1:10000), Cruz Marker\textsuperscript{TM} Molecular Weight Standards: sc-2035, UltraCruz\textsuperscript{®} Blocking Reagent: sc-516214 and Western Blotting Luminol Reagent: sc-2048. 2) Immunoprecipitation: use Protein A/G PLUS-Agarose: sc-2003 (0.5 ml agarose/2.0 ml).

3) Immunofluorescence: use m-IgG\textsubscript{k} BP-FITC: sc-516140 or m-IgG\textsubscript{k} BP-PE: sc-516141 (dilution range: 1:50-1:200) with UltraCruz\textsuperscript{®} Mounting Medium: sc-24941 or UltraCruz\textsuperscript{®} Hard-set Mounting Medium: sc-359850.
