Cbl-b (B-5): sc-376409

**BACKGROUND**

Cbl (also designated the c-Cbl proto-oncogene, E3 ubiquitin-protein ligase CBL, Casitas B-lineage lymphoma proto-oncogene, and RING finger protein 55) has been identified as the cellular homolog of the v-Cbl oncogene isolated from an NFS/N mouse that developed a pre-B cell lymphoma following infection with the replication-competent Cas Br-M murine leukemic virus. c-Cbl is expressed at relatively high levels in a wide range of hematopoietic tumor cell lines as well as in normal tissues such as thymus and testis. The c-Cbl gene product has been identified as a cytoplasmic protein with apparent DNA binding and dimerization domains characteristic of transcription factors. A single c-Cbl locus termed Cbl2 has been mapped to human chromosome 11q23. This region of chromosome 11 is involved in translocations and deletions in a broad range of leukemias; c-Cbl has been found to be translocated from chromosome 11 in leukemias with either t(4;11) or t(11;14) abnormalities. Two proteins related to c-Cbl have been identified as Cbl-b (RING finger protein 56) and Cbl-3 (RING finger protein 57). Cbl-b has a proline-rich domain, a nuclear localization signal, a C3HC4 zinc finger and a putative leucine zipper. Cbl-b is expressed in normal and malignant mammary epithelial cells, various normal tissues and hematopoietic tissue and cell lines. Data suggests that Cbl-b encodes a protein that can interact with signal transduction proteins to regulate their function or be regulated by them.

**CHROMOSOMAL LOCATION**

Genetic locus: CBLB (human) mapping to 3q13.11; Cblb (mouse) mapping to 16 B5.

**SOURCE**

Cbl-b (B-5) is a mouse monoclonal antibody specific for an epitope mapping between amino acids 953-982 at the C-terminus of Cbl-b of human origin.

**PRODUCT**

Each vial contains 200 µg IgG2b kappa light chain in 1.0 ml of PBS with < 0.1% sodium azide and 0.1% gelatin.

Cbl-b (B-5) is available conjugated to agarose (sc-376409 AC), 500 µg/0.25 ml agarose in 1 ml, for IP; to HR P (sc-376409 HR P), 200 µg/ml, for WB, IHC(P) and Cbl-b (B-5) is available conjugated to agarose (sc-376409 AC), 500 µg/0.25 ml sodium azide and 0.1% gelatin.

**APPLICATIONS**

Cbl-b (B-5) is recommended for detection of Cbl-b of mouse, rat and human origin by Western Blotting (starting dilution 1:100, dilution range 1:100-1:1000), immunoprecipitation [1-2 µg per 100-500 µg of total protein (1 ml of cell lysate)], immunofluorescence (starting dilution 1:50, dilution range 1:50-1:500), immunohistochemistry (including paraffin-embedded sections) (starting dilution 1:50, dilution range 1:50-1:500) and solid phase ELISA (starting dilution 1:30, dilution range 1:30-1:3000).

Molecular Weight of Cbl-b: 115-120 kDa.

Positive Controls: BJAB whole cell lysate: sc-2207, JM1 whole cell lysate: sc-364233 or U-87 MG cell lysate: sc-2411.

**DATA**

Cbl-b (B-5): sc-376409. Western blot analysis of Cbl-b expression in BJAB (A), JM1 (B) and U-87 MG (C) whole cell lysates.

**SELECT PRODUCT CITATIONS**

**RESEARCH USE**

For research use only, not for use in diagnostic procedures.

**STORAGE**

Store at 4°C. **DO NOT FREEZE**. Stable for one year from the date of shipment. Non-hazardous. No MSDS required.
