BACKGROUND

The StARD (steroidogenic acute regulatory protein-related lipid transfer (START) domain containing) family of proteins is comprised of 15 different members. All members contain the characteristic START domain and are believed to play key roles in the metabolism and transport of lipids. The StARD proteins are grouped into six subfamilies based on their START domain sequences. StARD8, StARD12 and StARD13 constitute one subfamily, namely the RhoGAP START group. StARD13, also known as DLC2 (deleted in liver cancer protein 2) or GT650, is a RhoGAP protein specific for RhoA and Cdc42. StARD13 contains one RhoGAP domain, one SAM (sterile alpha motif) domain and one START domain. It localizes to the mitochondrion and cytoplasmic speckles in close association with lipid droplets, suggesting an additional function for StARD13 in mitochondrial lipid transport. StARD13 is ubiquitously expressed but is often deleted in hepatocellular and breast cancer cells, implying that StARD13 also acts as a tumor suppressor.

REFERENCES

CHROMOSOMAL LOCATION

Genetic locus: STARD13 (human) mapping to 13q13.1; Stard13 (mouse) mapping to 5 G3.

SOURCE

StARD13 (H-10) is a mouse monoclonal antibody raised against amino acids 1-60 mapping at the N-terminus of STARD13 of human origin.

PRODUCT

Each vial contains 200 µg IgG kappa light chain in 1.0 ml of PBS with < 0.1% sodium azide and 0.1% gelatin.

STORAGE

Store at 4°C, **DO NOT FREEZE**. Stable for one year from the date of shipment. Non-hazardous. No MSDS required.

APPLICATIONS

StARD13 (H-10) is recommended for detection of STARD13 of mouse, rat and human origin by Western Blotting (starting dilution 1:100, dilution range 1:100-1:1000), immunoprecipitation (1-2 µg per 100-500 µg of total protein (1 ml of cell lysate)), immunofluorescence (starting dilution 1:50, dilution range 1:50-1:500) and solid phase ELISA (starting dilution 1:30, dilution range 1:30-1:3000).

Molecular Weight of STARD13: 125 kDa.

Positive Controls: STARD13 (m): 293T Lysate: sc-123813.

RECOMMENDED SUPPORT REAGENTS

To ensure optimal results, the following support reagents are recommended:

DATA

StARD13 (H-10): sc-377054. Western blot analysis of STARD13 expression in non-transfected: sc-117752 (A) and mouse STARD13 transfected: sc-123813 (B) 293T whole cell lysates.
