Sel-1L (G-11): sc-377351

**BACKGROUND**

Sel-1L resides mainly in the cytoplasm but also in the nuclei of normal pancreas cells. It has antiproliferative properties with the ability to hinder tumor cell growth in human breast, pancreas, esophageal, and prostate cancers. Sel-1L does this by remodeling the extracellular matrix which creates a microenvironment that is unfavorable to invasive growth. It may also play a role in TGF-β signaling. Approximately two thirds of breast tumors exhibit drastic downregulation or absence of Sel-1L expression, which causes the cell-matrix interactions and collagen binding to be disrupted. It has been hypothesized that Sel-1L may mediate cellular changes that promote the transition from a normal mucosa to a neoplastic lesion, suggesting that Sel-1L may be useful identifying patients who have a high risk of developing cancer.

Genetic locus: SEL1L (human) mapping to 14q31.1; Sel1l (mouse) mapping to 12 D3.

**SOURCE**

Sel-1L (G-11) is a mouse monoclonal antibody raised against amino acids 417-473 mapping within an internal region of Sel-1L of human origin.

**PRODUCT**

Each vial contains 200 µg IgGκ kappa light chain in 1.0 ml of PBS with < 0.1% sodium azide and 0.1% gelatin.

**APPLICATIONS**

Sel-1L (G-11) is recommended for detection of Sel-1L of mouse, rat and human origin by Western Blotting (starting dilution 1:100, dilution range 1:100-1:1000), immunoprecipitation [1-2 µg per 100-500 µg of total protein (1 ml of cell lysate)], immunofluorescence (starting dilution 1:50, dilution range 1:50-1:500), immunohistochemistry (including paraffin-embedded sections) (starting dilution 1:50, dilution range 1:50-1:500) and solid phase ELISA (starting dilution 1:30, dilution range 1:30-1:3000).

Sel-1L (G-11) is also recommended for detection of Sel-1L in additional species, including equine, canine, bovine and porcine.
