

QTRT1 (D-7): sc-398918

BACKGROUND

QTRT1 (queuine tRNA-ribosyltransferase 1) is a 403 amino acid protein that belongs to the queuine tRNA-ribosyltransferase family. QTRT1 interacts with QTRTD1 to form an active queuine tRNA-ribosyltransferase. This enzyme exchanges queuine for the guanine at the wobble position of tRNAs with GUN anticodons, thereby forming the hypermodified nucleoside queuosine. In both QTRT1 and QTRTD1, the four key residues responsible for Zn²⁺ binding, Cys302, Cys304, Cys307, and His333, are conserved. QTRT1 binds one zinc ion per subunit. The QTRT1 gene is conserved in chimpanzee, canine, bovine, mouse, rat, zebrafish, fruit fly, mosquito, *C. elegans*, *S. pombe*, *M. grisea*, *N. crassa*, rice and *P. falciparum*, and maps to human chromosome 19p13.2.
