**BACKGROUND**

Human papillomaviruses, mainly type 16 (designated HPV16), infect the genital tract and may lead to cervical cancer. Protection to HPV16 is thought to be provided by neutralizing antibodies directed to the major capsid protein L1 of HPV16. HPV16 L1 forms the pentameric assembly unit of the viral shell, and the binding of HPV16 L1 to the cell surface without the involvement of minor capsid protein L2 is believed to be the first step of HPV16 infection. The L1-binding domain located near the C-terminus of L2 binds L1 prior to completion of capsid assembly and is required for efficient encapsidation of the viral genome. In addition, the C-terminus of L1 is necessary for both DNA binding and DNA packaging. Expression of the late gene L1 is restricted to the upper layers of the infected epithelium. HPV16 L1 is able to package unrelated plasmid DNA in vitro and deliver the foreign DNA to eukaryotic cells with the subsequent expression of the encoded gene. L1 shows a diffuse nuclear distribution, whereas L2 is localized to punctate nuclear regions identified as promonocyctic leukemia protein oncogenic domains (PODs). Coexpression of L1 and L2 induces a relocation of L1 into the PODs.

**REFERENCES**

**SOURCE**

HPV16 L1 (CAMVIR-1) is a mouse monoclonal antibody raised against amino acids 198-531 of recombinant HPV16 L1 protein.

**PRODUCT**

Each vial contains 200 µg IgG<sub>k</sub> kappa light chain in 1.0 ml of PBS with < 0.1% sodium azide and 0.1% gelatin.

HPV16 L1 (CAMVIR-1) is available conjugated to agarose (sc-47699 AC), 500 µg/0.25 ml agarose in 1 ml, for IP; to HRP (sc-47699 HRP), 200 µg/ml, for WB, IHC and ELISA; to either phycoerythrin (sc-47699 PE), fluorescein (sc-47699 FITC), Alexa Fluor<sup>®</sup> 488 (sc-47699 AF488), Alexa Fluor<sup>®</sup> 546 (sc-47699 AF546), Alexa Fluor<sup>®</sup> 594 (sc-47699 AF594) or Alexa Fluor<sup>®</sup> 488 (sc-47699 AF488) 200 µg/ml, for WB (RGB), IF, IHC and FCM; and to either Alexa Fluor<sup>®</sup> 680 (sc-47699 AF680) or Alexa Fluor<sup>®</sup> 790 (sc-47699 AF790), 200 µg/ml, for Near-Infrared (NIR) WB, IF and FCM.

**APPLICATIONS**

HPV16 L1 (CAMVIR-1) is recommended for detection of HPV16 L1; may cross react with HPV6 of HPV16 origin by Western Blotting (starting dilution 1:200, dilution range 1:100-1:1000), immunoprecipitation (1-2 µg per 100-500 µg of total protein (1 ml of cell lysate)), immunofluorescence (starting dilution 1:50, dilution range 1:50-1:500) and immunohistochemistry (including paraffin-embedded sections) (starting dilution 1:50, dilution range 1:50-1:500); non cross-reactive with HPV6 or HPV11.

Molecular Weight of HPV16 L1: 55 kDa.

**STORAGE**

Store at 4°C, **DO NOT FREEZE**. Stable for one year from the date of shipment. Non-hazardous. No MSDS required.
